

Thyroid carcinoma (THCA)

Figure: Gene expression data was obtained from TCGA, pancancer normalized (EDaseq) and log transformed. Samples are ordered by ICR score. Optimal k for clustering was 3. The combination action performed to reduce to 3 clusters is: none Resulting in mean ICR scores of 5.65 / 6.86 / 8.74 for Low / Medium / High resp.

Deconvolution immune cell populations

Figure: EDaseq normalized, log transformed gene expression data was obtained from TCGA, using Assembler_Pance_Normalized_filtered. Bindea_ORIG enrichment z-scores were used to generate this heatmap.
