

Supplemental material

A reproducibility package is accessible as an [open science framework project](#).

Survey

- survey questions
- an executable RMarkdown script which produces Figure 1 in the paper and additional information not mentioned in the text (e.g. background of the participants)
- anonymised survey data

Interview

- interview questions
- tables showing the grounded theory approach (statements, codes, categories)
- survey for demographic information
- consent form

Focus group

- tables showing the grounded theory approach (statements, codes, categories)
- consent form

Reproducibility study

- data and an executable RMarkdown for Figure 2 in the paper
- list of the 40 examined papers
- list of issues we encountered during reproduction of the 40 papers*
- side-by-side comparison of original and reproduced figures*
- list of differences between original and reproduced figures*
- papers including figures which have the corresponding differences*

These materials (except *) will be published on *Zenodo* (<https://zenodo.org/>) once the paper is accepted.

***We do not want to blame or discourage authors who published their source code and data. These materials are consequently accessible only for reviewers and will not be published.**
