

Table S2: The study species and associated ecological data used in the analysis. Species were classified using a binary system for carnivory, ant specialisation and plant specialisation (1 = specialised, 0 = not specialised). The type of ant association is abbreviated as follows: m = mutualist, p = parasite, n = not ant associated. This information is based on literature and expert opinions. Expert initials are as follows: AH: Alan Heath, RR: Robert R. Robbins, RV: Roger Vila, VL: Vladimir Lukhtanov.

Genus	Species	Subfamily	Carni- vory	Ant spe- ciali- sation	Plant spe- ciali- sation	Type of ant assoc	Wing- span (mm)	Reference
<i>Acrodipsas</i>	<i>aurata</i>	Theclinae	1	1	0	p	23	[1, 2]
