

## LIST OF FIGURES

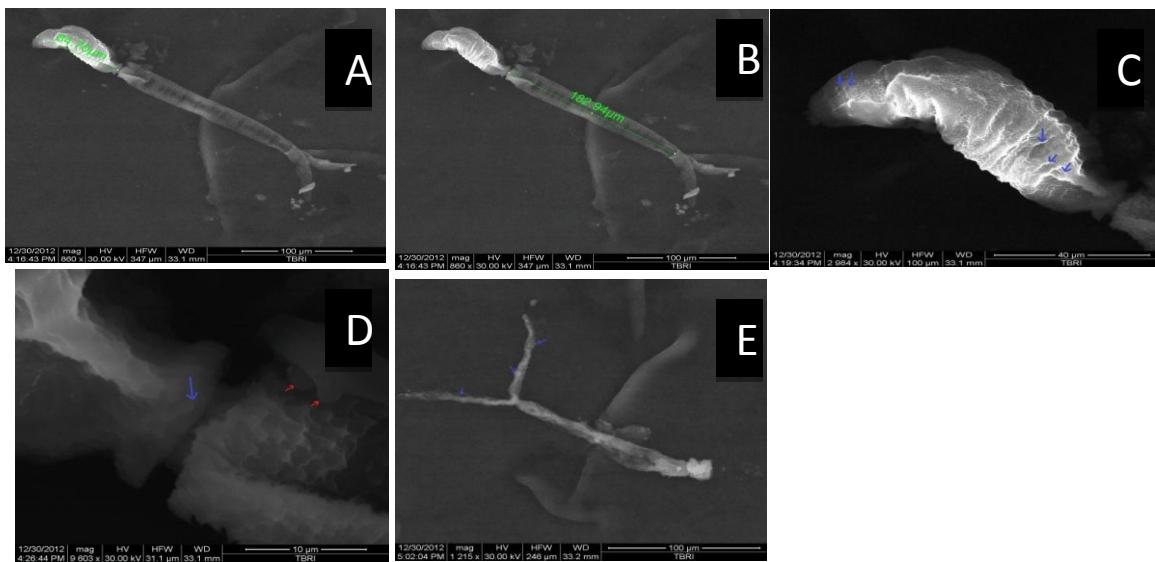

**Figure S2 (A-D):** **A:** Dose-response curve of % mortality of adult *S.mansoni* exposed to different concentrations of *H.saudi-arabica* ethanolic extract and pregnane glycoside respectively at 1hour. EC50 for *Hurenia* ethanolic extract was14.36 while for pregnane glycoside it was 36.60. **B:** Dose-response curve of % mortality of *S.mansoni* cercariae exposed to different concentrations of *H.saudi-arabica* ethanolic extract and pregnane glycoside at 3hours. EC50 for *Hurenia* ethanolic extract was 4.037, while for pregnane glycoside it was 5.408. **C:** Dose-response curve of % mortality of *S.mansoni* miracidia exposed to different concentrations of *H.saudi-arabica* ethanolic extract and pregnane glycoside at 1/2h. EC50 was 5.923 while for pregnane glycoside it was 9.563. **D:** Dose-response curve of % inhibition of egg hatching of *S.mansoni* exposed to different concentrations of *H.saudi-arabica* ethanolic extract and pregnane glycoside at 1/2h. EC50 for ethanolic extract was 6.212 while for pregnane glycoside it was 48.15. Where EC50 is the concentration of a drug that gives half-maximal response.

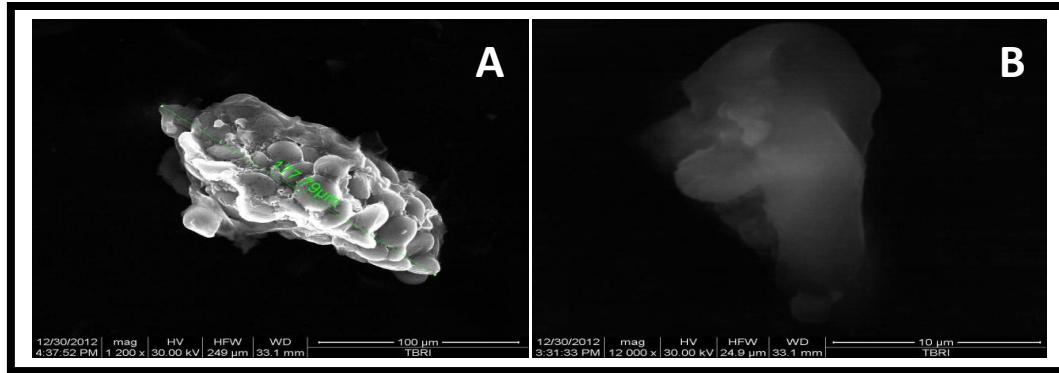

**Figure S 3:** SEM of *S.mansoni* adult male showing morphological changes of the male worms after 24 hrs exposure to a mixture of 2.5 $\mu$ g/ml, 2.6  $\mu$ M of *H.saudi-arabica* ethanol extract and pregnane glycoside, respectively. Tegumental structures were heavily disturbed, oedematous with reduced numbers of tubercles and spines, among them multiple perforations (arrows) seen clearly in (A, B1, B2&B3). Remarkable thickening and shrinkage of the tegument mostly seen at the regions of suckers (C) The oral sucker was contacted, damaged and the tegumental surface appeared lacking tubercles, spongy with blebbing (D1&D2). The ventral sucker shows small blebs and perforations in between the remaining spines with loss of the tire-like appearance (E).

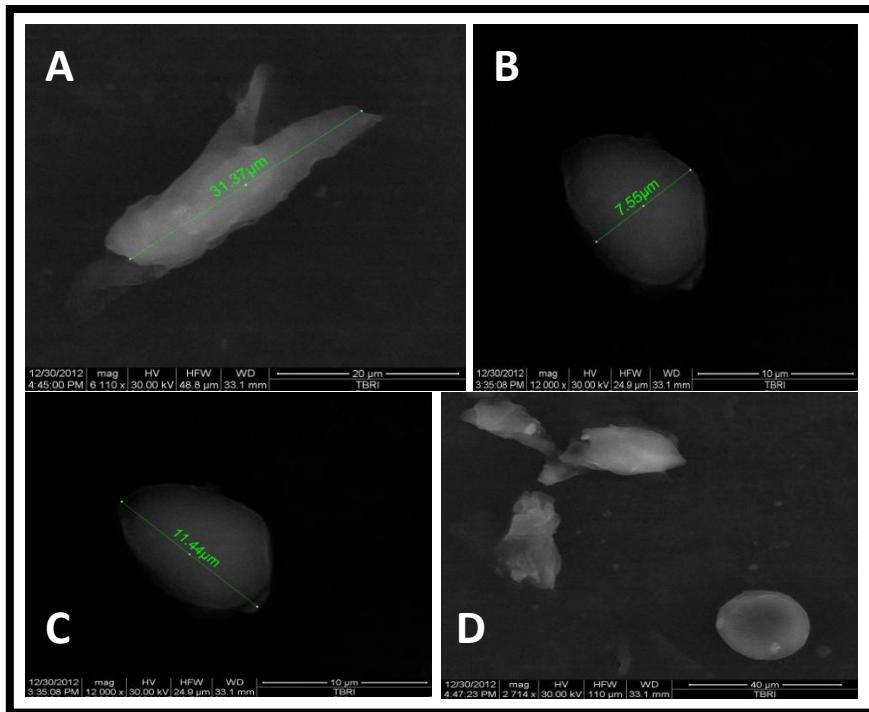

**Figure S4:** SEM of *S.mansoni* adult female showing morphological changes of the female worms after 24 hrs exposure to a mixture of 2.5μg/ml, 2.6μM of *H.saudi-arabica* ethanol extract and pregnane glycoside respectively. The tegument is shrunken, oedematous with numerous small protuberances. Multiple wide holes (arrows) are clearly evident at the region of the oral and ventral suckers which appear deformed (A&B). Deep grooves appear at the area of the retracted ventral sucker with loss of the tyre-like appearance(C&D). Erosions of the tegument are seen clearly in (E).

**Figure S5:** SEM of *S.mansoni* cercariae after 4hrs exposure to a mixture 12.5 $\mu$ g/ml, 13 $\mu$ M of both *H.saudiarabica* ethanol extract and pregnane glycoside, respectively. Morphological changes in both body and tail were visible in the form of shrinkage and thickening of the tegument clearly seen in (A&B). There is extensive contraction, wrinkling and bending of the body with erosions of the tegument (arrows) seen in (C).The collar-like region seen in (D) shows fusion of ridges and loss of spines (blue arrow) while vesicles are seen in the tail region just below the body (red arrow).The distal bifid part of the tail shows vesicles/blebs and erosions of the tegument as seen in (E).

**Figure S6:** Shows morphological changes of *S.mansoni* miracidium 2 hrs after exposure to a mixture 5 $\mu$ g/ml, 5.2 $\mu$ M of both ethanolic extract of *H.saudi-arabica* and its isolate; pregnane glycoside. (A) swellings, vesiculation, formation of blebs that completely masking the ciliated surface with preservation of the apical cone.(B) shows completely disfigured miracidium with complete loss of ciliae and apical cone.

**Figure S7:** SEM of *S.mansoni* ova exposed to a mixture 25 $\mu$ g/ml and 26 $\mu$ M of both ethanolic extract of *H.saudi-arabica* and its isolate; pregnane glycoside, respectively for 2 hrs. Some ova show elongation with shrinkage of the shell clearly seen in (A). Others become oedematous, swollen with loss of the lateral spines as seen in (B&C). There is complete loss of the microspecules-like chitinous minute projections of the egg shell surface that is clearly seen in (D).
