

Figure S1. Expression profiles of up- and down-regulated maize transcripts in local and systemic leaves.

Maize leaves were treated with WW or WO, and samples were collected at 6 h. Venn diagrams depict the numbers of (a) up- and (b) down-regulated genes. Details of the genes in different areas (denoted by the small letters) of the Venn diagrams can be found in Table S7 and S8. The number 2 or 6 before WW and WO indicates the time (h) of sample harvested, and the “Loc” or “Sys” after WW and WW represents local and systemic samples, respectively.
