Significant correlation between genes and left ventricular ejection fraction (LVEF), left ventricular diameter at diastole index (LVEDDI) or serum NT-pro BNP was assumed by a nominal p-value<0.01. Additionally, Benjamini-Hochberg corrected p-values (p_{BH}) and Spearman correlation coefficient ρ (rho) are given. Gene symbol and annotation was derived by UniGene database (NETAFFX).

Supplemental Table 3. Top canonical pathways of genes significantly correlating with NT-proBNP, LVEDDI or LVEF ($p < 0.01$).

Top Canonical Pathways are given for genes significantly ($p < 0.01$) correlating with LVEF, LVEDDI or BNP. The p -value of the Fisher's exact test and the ratio of the number of genes from the list that maps to the pathway divided by the total number of the genes that map to the same pathway were given to return the measure of association in IPA. Additionally, the enrichment of genes as indicated by the negative log (p -value) was colored. Dark red indicates high enrichment of genes and white color of the negative log (p -value) indicates no enrichment.
