

## **Appendix 1: Alternative Models**

Table A1.1 below presents the results of the multinomial logistic regressions differentiating between committees based on their type of output, ran separately for each term. The committee seniority variable for the 1992-1996 term is missing from the model because it was coded 0 for all MPs, given that the 1990-1992 Parliament acted as a Constituent Assembly and the work in parliamentary committees was very limited.

**Table A1.1: Determinants of assignment by type of committee output**

	Public Goods					High policy					Distributive
