# This deck of slides

- What is Open Data
- Openness as Umbrella
- User-centred approaches and examples for/using open data
- Propositions
- Some references

# What is Open Data?

- *The Open Data Handbook* defines Open Data as: "**Data that can be freely used, re-used and redistributed by anyone - subject only, at most, to the requirement to attribute and sharealike.**" (Open Knowledge International, n.d.)
- **Availability and Access:** the data must be available as a whole and at no more than a reasonable reproduction cost.
- **Re-use and Redistribution:** the data must be provided under terms that permit re-use and redistribution, including the intermixing with other datasets.
- **Universal Participation:** everyone must be able to use, re-use and redistribute. There should be no discrimination against fields of endeavour or against persons or groups.

<http://opendatahandbook.org/>

# Open Data for Civic Engagement

- “All citizens should have equal opportunities and multiple channels to access information, be consulted and participate. Every reasonable effort should be made to engage with as wide a variety of people as possible” (OECD, 2009, p.17).
- Transversal skills development- critical engagement with government, cultural heritage, scientific research, educational resources (Atenas, Havemann & Priego 2015)
- “A fundamental consequence of diminishing public trust in local government is a loss of civic engagement. Public trust and civic engagement depend on people having access to accessible data to engage.” (Shapiro 2018)

# Open Science / Open Data / Open Access /Open Education / Open Government

- Today we also should also ask: who benefits from Openness, and at what cost?
- Who is therefore the user of open data and open content?
- Are they being considered in the co-designing of infrastructure and processes?

# What we don't know well yet:

- Who really uses open data? What for? How? When? Where? What are their challenges and expectations?
- User-centred approaches can help- so far the user of open resources has generally not been taken into account in the design process of processes, technologies, interfaces, metrics
- User-centred design methods can help!

# (User-centred design)

- Research users and what they want to do
  - Develop designs and build prototypes
  - Evaluate the designs
- 
- “this isn’t a one-shot deal. It’s a cycle.” (UX Fundamentals, City Interaction Lab 2018)

# Open Data User Persona Libraries

“Who is accessing open data — and who isn’t? What do communities need that can be found in open data? Community-centered or human-centered design strategies in general can help city staff keep their stakeholders’ needs within their scope of awareness as they manage open data.”

# Open Metrics for Open Data

- Co-designed with users
- “We adopted a much more user-centred approach to data research using small structured problems and then working from these to see how open data can help address the problems it is to be successful.” (OGP2015)

Strengthening the evidence-base for open government in developing countries

User Centred Methods for Measuring the Value of Open Data

<https://www.opengovpartnership.org/documents/user-centred-methods-for-measuring-the-value-of-open-data/>

# User-Centric Evaluation of UK Non-Print Legal Deposit

“Users increasingly rely upon personal devices and specialist software, and remote access to materials, whereas NPLD was designed to mirror access to print legal deposit collections.” (Gooding, Terras, Berube 2019)

The screenshot shows the University of Glasgow Enlighten Publications interface. At the top, the University of Glasgow logo is on the left, and navigation links for 'Subjects A-Z', 'Staff A-Z', and 'Academic units A-Z' are on the right. Below this is a breadcrumb trail: 'Home > Enlighten > Publications >'. The main heading is 'Enlighten: Publications'. A secondary navigation bar includes links for 'About', 'Latest Additions', 'Search', 'Browse', 'Open Access', 'ORCID', and 'My Publications'. The featured publication is 'Towards User-Centric Evaluation of UK Non-Print Legal Deposit: a Digital Library Futures White Paper' by Gooding, P., Terras, M., and Berube, L. (2019). A small thumbnail image of the document is shown next to the text: 'Text', '186755.pdf - Published Version', 'Available under License Creative Commons Attribution.', and '2MB'. At the bottom, the publisher's URL is given as 'http://elegaldeposit.org'.

# Reusing Open Data for New Audiences: Parables of Care. Creative Responses to Dementia Care, as Told by Carers (Grennan, Sperandio, Wilkins, Priego 2017)

***Parables of Care*** explores the potential of comics to enhance the impact of dementia care research. Project led from Centre of HCID, City, University of London, with the University of Chester and Douglas College, Canada.

The 16-page co-designed publication presents in comics form true stories of creative responses to dementia care, as told by carers, co-designed with stakeholders and adapted from a group of over 100 open case studies available at <http://carenshare.city.ac.uk>.

It can be downloaded Open Access from <http://openaccess.city.ac.uk/18245/>

# Cases from Open Data - Care N Share App Centre for HCID, City, University of London

“There are 850,000 people with dementia in the UK, with numbers set to rise to over 1 million by 2025. This will soar to 2 million by 2051. 225,000 will develop dementia this year, that's one every three minutes. 1 in 6 people over the age of 80 have dementia.”

**CareNShare**

input case

The Care'N'Share website provides you with access to good care practices in residential, live-in, domiciliary, acute, day service and family care. It automatically retrieves good care practices in response to a current care situation that you are encountering. It then guides you to reflect and create new ideas about the care that you need to deliver.

# Open Access Kidnapped

- For-profit publishers have embraced Open Access models through a variety of often-contradictory licensing schemes, financed by Article Processing Charges where the author pays to open outputs up
- Hybrid Publishing (paywalled journals that also offer Open Access 'options' incur in double-dipping, where libraries and academics pay twice for the same content
- Opacity of pricing (sometimes only obtainable via FOI requests) that frustrate competition, transparency, critique and accountability
- Reputational value remains the most valuable bargaining chip for for-profit publishers
- Average Article Processing Charge paid by UK institutions for a "hybrid" journal open access article: £1762 (Lawson et al, 2015)

# Propositions

- Open Access to research and data as a strategy and set of scholarly values remains desirable for the Global South- the legacy subscription model creates further inequality.
- Open Access / Open Data is not just about business models (how to finance scholarly publishing or content infrastructures), but about a specific type of research/communication cycle.
- User-centred design of open infrastructures and related reward and assessment cultures can help tackle these challenges, but UCD, sharing data and preprints all takes time, effort, skill, money.

.

# Propositions

- Open Access and Open data require specific modes of licensing that can offer different degrees of openness as currently defined, as long as they don't short-circuit the goals of open science.
- We won't be able to transform scholarly communication business models, or government participation models towards greater equality until we transform traditional workflows and IP paradigms so they embed user-centred approaches to openness first.
- For it not to foster further inequality, user-centred openness must be embedded in the whole research/communication cycle (this means also transparency, accountability, reproducibility) and covers metrics and methods of assessment too

# Propositions

- Internationally, we don't know yet how to *really* share-- and our methods of assessment, our ongoing appreciation of reputational and financial value are still based on vertical, exclusionary, closed-up structures- more equality via openness means a challenge to privileged elites.
- The skills, reward infrastructures and context enabling a culture of sharing data and research and encouraging its reuse it is still not evenly distributed, creating new elites and new divides.
