## **Developing the New Craft Skills for Object Based Media**

**Mike Armstrong**

BBC Research and Development, Salford, UK

Object-Based Media will require  
a new set of craft skills  
for responsive storytelling.

This is work in progress...

For over 10,000 years the world was rich with stories without any of them being written down.

These stories were not text,  
they were algorithms,  
and responded to the audience.

Albert B. Lord  
Book – *The Singer of Tales*

Storytelling was changed by writing,

Walter J. Ong  
Book - *Orality and Literacy*

...followed by printing, photography,  
film, radio, television et al!

Marshal MaLuhan

Book - *Understanding Media: The Extensions of Man*

So how might we make  
responsive (factual) stories?

First we need to cast the  
audience in an engaging role.

Walter J. Ong

*The Writer's Audience Is Always a Fiction*

The role needs to fit with  
the nature of the stories  
and the style of interaction,  
  
and the audience needs  
to understand their role.

- Explorer...?
- Maker...?
- Participant...?
- Player...?
  
- (Student...?)

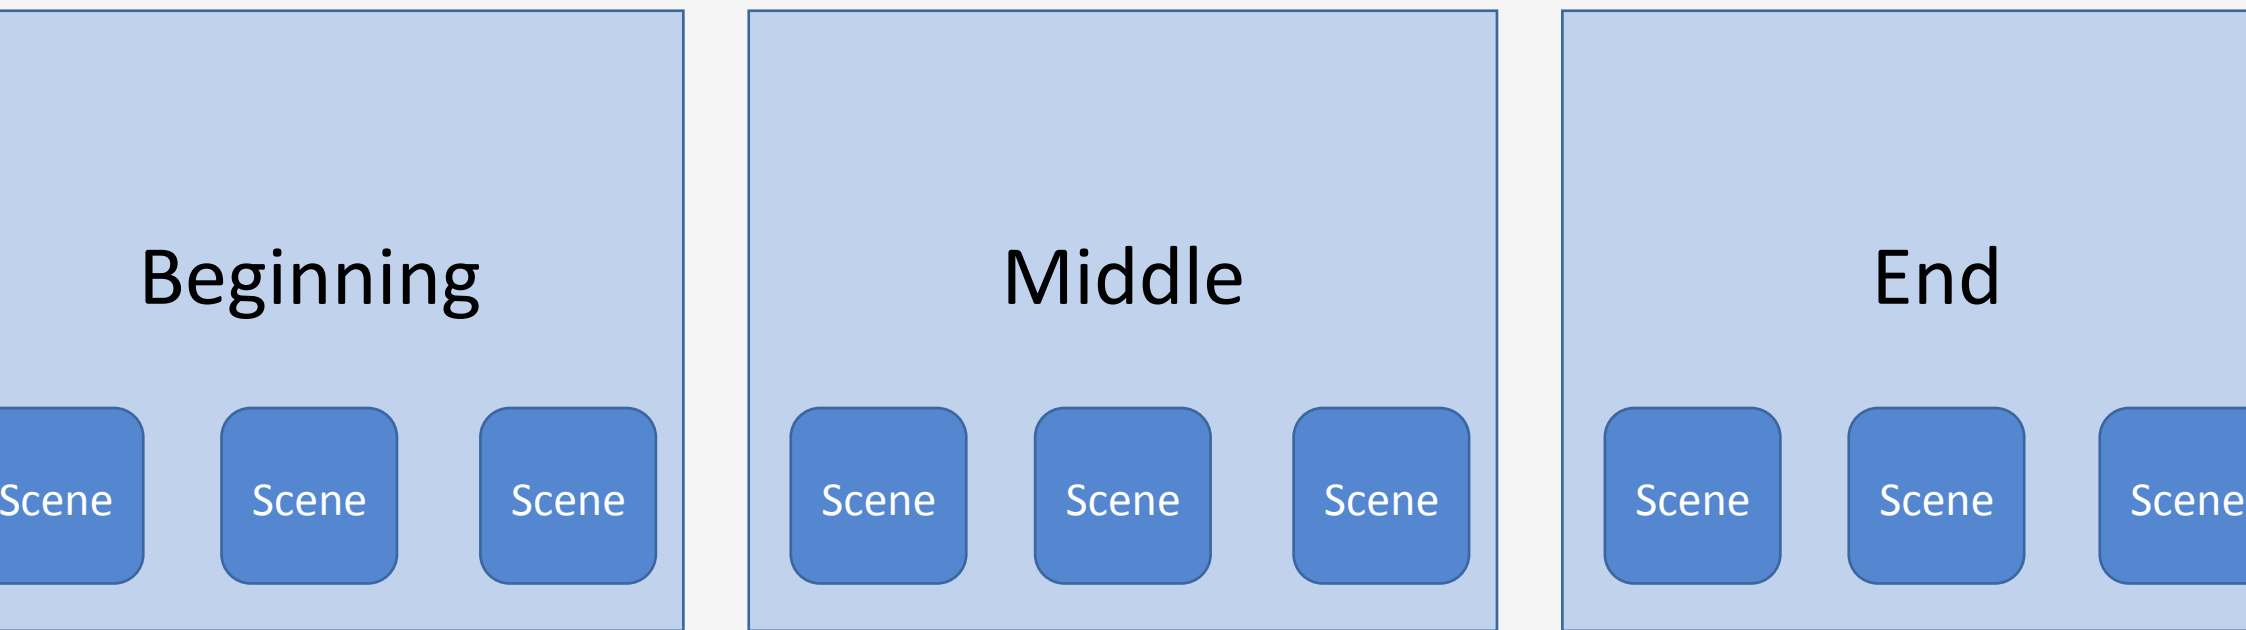

An observation...

Responsiveness does not work well for  
narrative forms which  
developed as fixed media.

# The three act play – fixed, scripted story structure

From Ancient Greek theatre – early fixed media

# Branching Narrative – the problem!

Story branches to alternative outcomes based on choices.

Many different stories.

The choices have to be constrained to prevent a combinational explosion.

So can we learn  
from video games...?

# Four types of games narrative

- Environmental
- Enacted
- Embedded
- Emergent

Henry Jenkins

Paper - *Game Design as Narrative Architecture*

THE LEGEND OF  
**ZELDA**  
BREATH OF THE WILD

# Environmental

Incredible!

FORT HATENO

11:15

# Enacted

Teba

While I'm doing that, use your  
**bomb arrows** to **destroy the cannons**.

# Embedded

This little one and I are getting along quite well now.

Emergent

The same types of narrative can  
be identified in live television,  
  
for example a news bulletin.

# Environmental

# Enacted

Live broadcasting and video games  
share common narrative forms.

We can make responsive media by  
building them like live programmes.

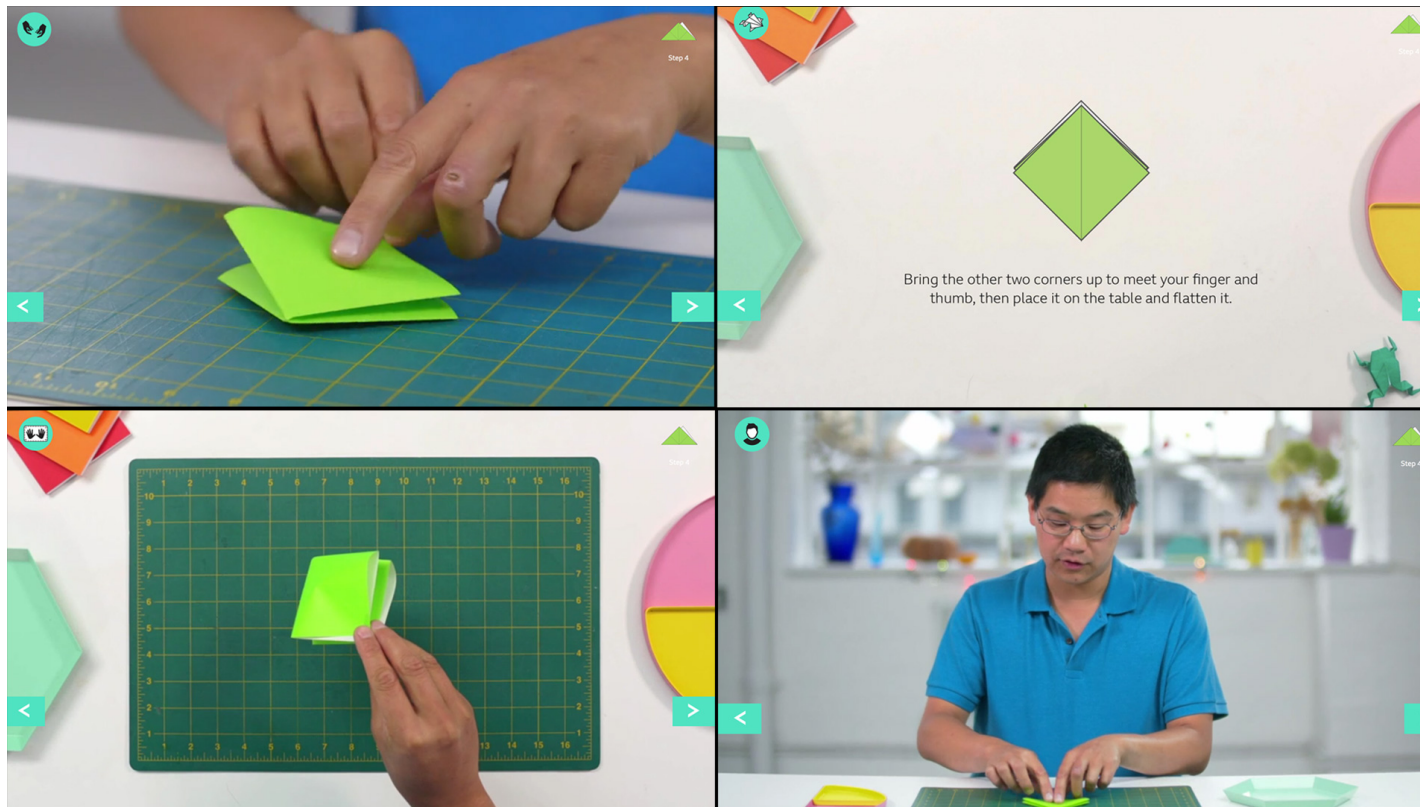

Where next?.

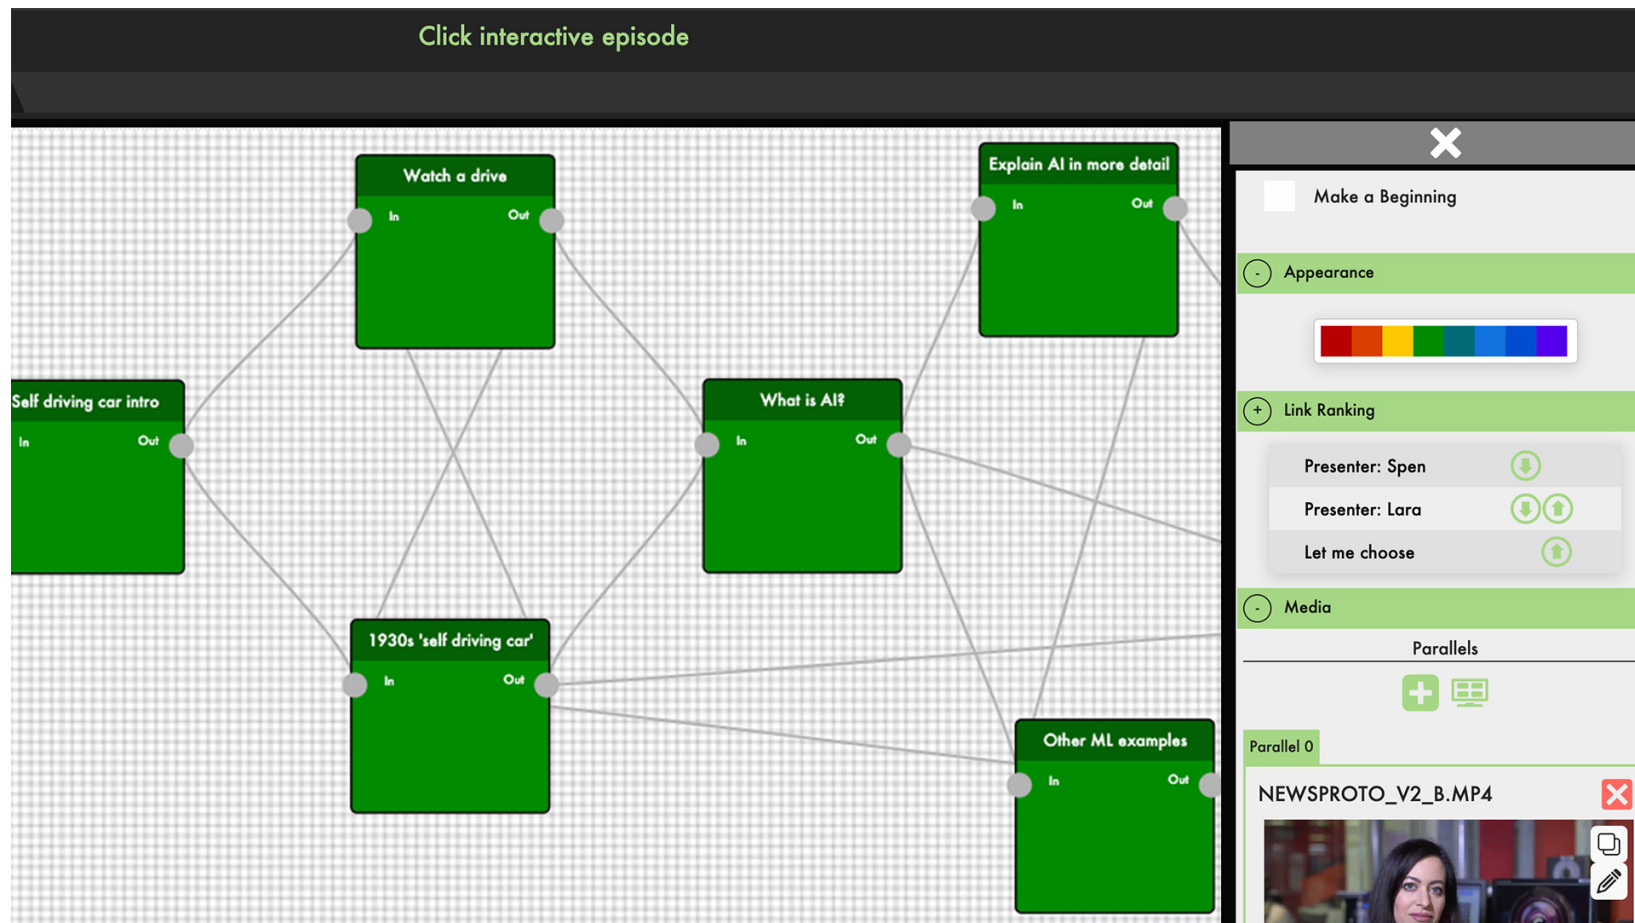

360 content is strong for  
**environmental** storytelling.

# Make-along experiences are, in effect, **enacted** content.

# R&D's StoryFormer tool is enabling linked items of **embedded** narrative

**Emergent** narrative will come out of participation by the audience.

Stories will arise as people share data and stories around places, events and their environment.
