

A synthesis of restoration in California relevant to the San Joaquin Valley

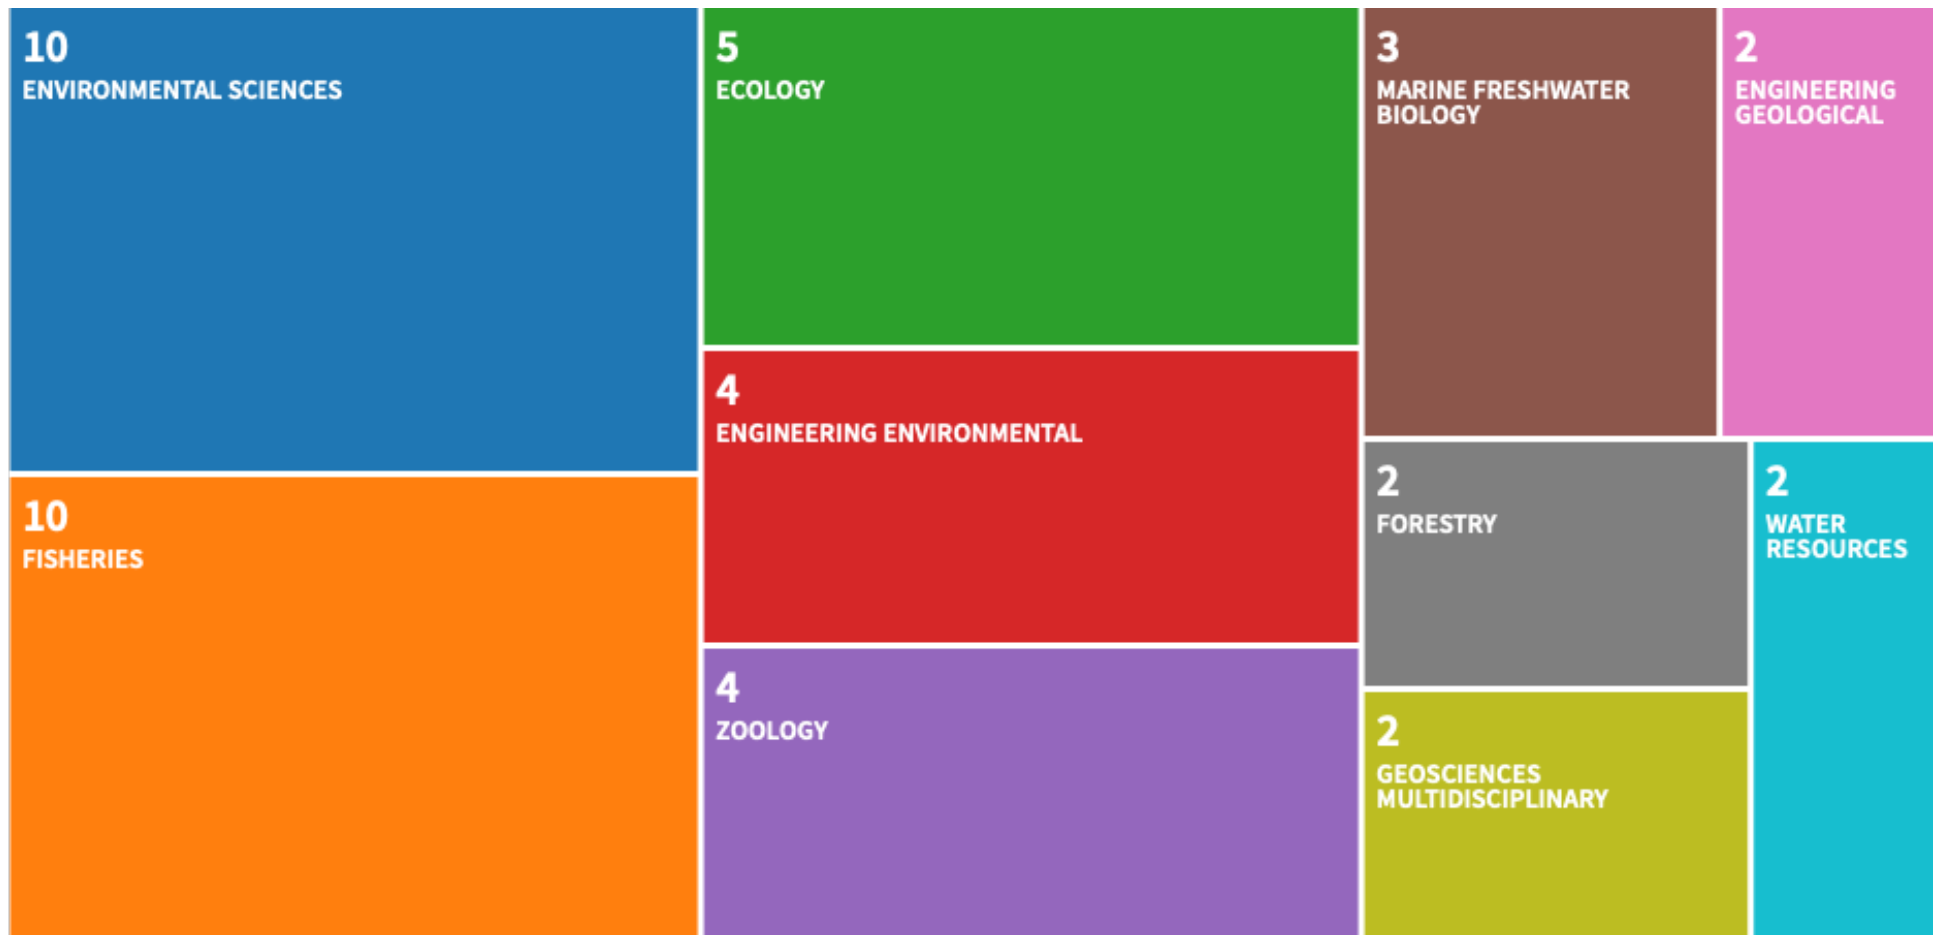

@cjlortie

primary goal

is to derive lessons from scientific syntheses
(not the primary literature) on restoration
for California with specificity to this region

Lortie but would like to invite Filazzola & Miguel

a total of 30 + 1 relevant reviews and metas

synthesis
mechanisms
review syntheses published
apply synthesis
implications = lessons

Part I.

Compile synthesis evidence from former review & meta-analyses

Generate quantitative estimates of key levers & summarize qualitative findings

Explore alternative forms of evidence and synthesize

Describe patterns across studies

Part 2.

Explore target San Joaquin Valley studies that have extracted data

Compile and present findings

lessons

- a. Team and network science for region
- b. Move from surveys to manipulation
- c. List of key contexts to consider
- d. How to enable focused and more useful research for decisioning and for reuse within region.

Challenges

restrict to California only?

sparse replication between studies

ideal elements to consider in a synthesis
in a book chapter

Gregory Urquiaga/UC Davis
