

## Data Supplement: Supplemental Figure 3

Figure S3. Covariation among psychophysical parameters.

**A.** (Top row) Covariation of sensitivity with criterion, choice criterion bias ( $b_{CC}$ ) and likelihood ratio bias ( $b_{LR}$ ) at the cue-opposite location. (Middle row) Same as top row, but for cue-adjacent location. (Bottom row) Covariation of sensitivity with criterion and  $b_{CC}$  at cued location. Color conventions are as in Fig 1E (main text). **B.** Covariation of difference indices (ADI) of sensitivity with those of criteria (left) and  $b_{CC}$  (right). **C.** Covariation of modulation indices (AMI) of sensitivity with that of criteria (upper left),  $b_{CC}$  (upper right) and  $b_{LR}$  (lower).
