**Hypothalamic structural and functional imbalances in anorexia nervosa**

Vincent Florent, Marc Baroncini, Patrice Jissendi-Tchofo, Renaud Lopes, Matthieu Vanhoutte, S. Rasika, Jean-Pierre Pruvo, Jean Vignau, Stephane Verdun, Jeanette E. Johansen, Marie Pigeyre, Sebastien G. Bouret, Ida A.K. Nilsson, Vincent Prevot

## Supplementary Tables

Metabolites	Comparisons	Mean diff.	95,00% CI of diff.	Significant?	Adjusted P Value	N1	N2	q	DF
Glx/Cr  $F_{(2, 23)} = 5.807$ $P = 0.0091$	CTL vs. CL	0.299	-1.23 to 1.828	No	0.877	8	10	0.692	23
	<b>CTL vs. AN</b>	<b>2.011</b>	<b>0.399 to 3.623</b>	<b>Yes</b>	<b>0.013</b>	<b>8</b>	<b>8</b>	<b>4.418</b>	<b>23</b>
	<b>CL vs. AN</b>	<b>1.712</b>	<b>0.183 to 3.241</b>	<b>Yes</b>	<b>0.026</b>	<b>10</b>	<b>8</b>	<b>3.965</b>	<b>23</b>
NAA/Cr  $F_{(2, 25)} = 2.251$ $P = 0.1262$	CTL vs. CL	0.619	-0.163 to 1.401	No	0.140	8	10	2.790	25
	CTL vs. AN	0.548	-0.234 to 1.329	No	0.209	8	10	2.468	25
	CL vs. AN	-0.071	-0.808 to 0.665	No	0.968	10	10	0.341	25
Ins/Cr  $F_{(2, 20)} = 0.3412$ $P = 0.7150$	CTL vs. CL	0.164	-0.454 to 0.782	No	0.783	7	10	0.949	20
	CTL vs. AN	-0.017	-0.715 to 0.681	No	0.998	7	6	0.088	20
	CL vs. AN	-0.181	-0.828 to 0.467	No	0.762	10	6	0.999	20
GPC/Cr  $F_{(2, 24)} = 2.571$ $P = 0.0973$	CTL vs. CL	0.077	-0.100 to 0.254	No	0.533	8	10	1.533	24
	CTL vs. AN	0.164	-0.017 to 0.345	No	0.081	8	9	3.198	24
	CL vs. AN	0.0875	-0.084 to 0.259	No	0.424	10	9	1.800	24

**Table S1. Feeding-evoked response of the metabolite-to-Creatine (Cr) ratio in the hypothalamus.** One-way ANOVA followed by a Tukey's multiple comparisons test. CTL, control; CL, constitutional leanness; AN, anorexia nervosa. Glx, glutamine + glutamate; NAA, *N*-acetyl-aspartate; Ins, myoinositol; Cho, choline.

Comparisons	Mean diff.	95,00% CI of diff.	Significant?	Adjusted P Value	n1	n2	t	DF
CTL fasting vs. CTL fed	-0.662	-1.833 to 0.510	No	0.406	8	8	1.454	23
CTL fasting vs. CL fasting	-0.357	-1.635 to 0.922	No	0.870	8	10	0.691	46
<b>CTL fasting vs. AN fasting</b>	<b>-1.505</b>	<b>-2.853 to -0.157</b>	<b>Yes</b>	<b>0.020</b>	<b>8</b>	<b>8</b>	<b>2.767</b>	<b>46</b>
CTL fed vs. CL fed	-0.058	-1.337 to 1.221	No	0.999	8	10	0.1118	46
CTL fed vs. AN fed	0.506	-0.842 to 1.854	No	0.735	8	8	0.9294	46
CL fasting vs. CL fed	-0.363	-1.411 to 0.685	No	0.764	10	10	0.8912	23
CL fasting vs. AN fasting	-1.148	-2.427 to 0.130	No	0.090	10	8	2.225	46
CL fed vs. AN fed	0.563	-0.716 to 1.842	No	0.628	10	8	1.091	46
<b>AN fasting vs. AN fed</b>	<b>1.349</b>	<b>0.177 to 2.521</b>	<b>Yes</b>	<b>0.021</b>	<b>8</b>	<b>8</b>	<b>2.964</b>	<b>23</b>

**Table S2. Evolution of the Glx/Cr ratio in the hypothalamus.** Two-way repeated measures ANOVA followed by a Sidak's multiple comparisons test. CTL, control; CL, constitutional leanness; AN, anorexia nervosa.

Metabolites	Comp.	Mean diff.	95,00% CI of diff.	Significant?	Adjusted P Value	n1	n2	q	DF
Glx/Cr  $F_{(2, 24)} = 0.913$ $P = 0.415$	CTL vs. CL	0.218	-1.048 to 1.485	No	0.903	9	10	0.608	24
	CTL vs. AN	0.711	-0.629 to 2.050	No	0.396	9	8	1.874	24
	CL vs. AN	0.493	-0.815 to 1.800	No	0.620	10	8	1.330	24
NAA/Cr  $F_{(2, 26)} = 1.593$ $P = 0.223$	CTL vs. CL	0.475	-0.429 to 1.379	No	0.405	9	10	1.846	26
	CTL vs. AN	0.627	-0.278 to 1.531	No	0.216	9	10	2.435	26
	CL vs. AN	0.152	-0.728 to 1.031	No	0.904	10	10	0.605	26
Ins/Cr  $F_{(2, 20)} = 0.841$ $P = 0.446$	CTL vs. CL	0.496	-0.496 to 1.488	No	0.431	8	10	1.789	20
	CTL vs. AN	0.155	-1.037 to 1.347	No	0.942	8	5	0.465	20
	CL vs. AN	-0.341	-1.486 to 0.805	No	0.735	10	5	1.065	20
Cho/Cr  $F_{(2, 26)} = 2.163$ $P = 0.135$	CTL vs. CL	0.135	-0.052 to 0.323	No	0.192	9	10	2.536	26
	CTL vs. AN	0.004	-0.184 to 0.191	No	0.999	9	10	0.0679	26
	CL vs. AN	-0.132	-0.314 to 0.051	No	0.192	10	10	2.536	26

**Table S3. Feeding-evoked response of the metabolite-to-Creatine (Cr) ratio in the thalamus.** One-way ANOVA followed by a Tukey's multiple comparisons test. CTL, control; CL, constitutional leanness; AN, anorexia nervosa. Glx, glutamine + glutamate; NAA, *N*-acetyl-aspartate; Ins, myoinositol; Cho, choline.

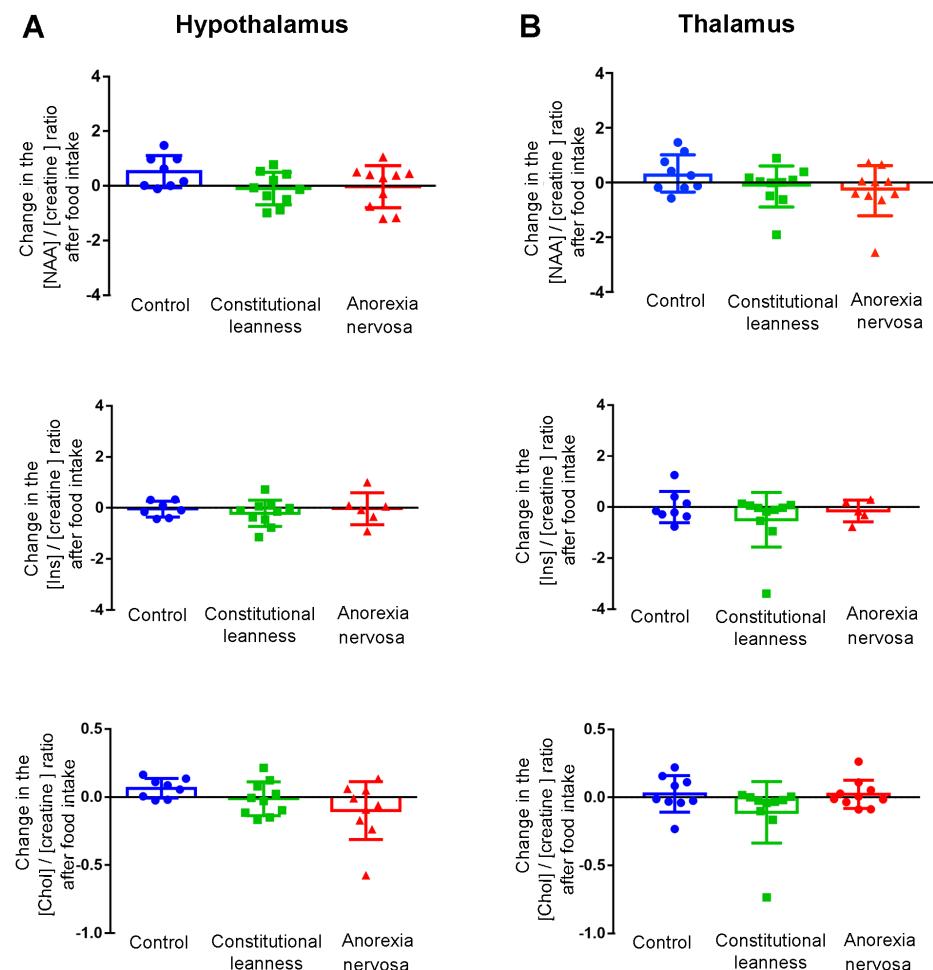

Comparisons	Mean diff.	95,00% CI of diff.	Significant?	Adjusted P Value	n1	n2	t	DF
CTL fasting vs. CTL fed	0.056	-0.888 to 1.000	No	0.998	9	9	0.152	24
CTL fasting vs. CL fasting	-0.011	-0.887 to 0.864	No	>0.999	9	10	0.032	48
CTL fasting vs. AN fasting	-0.206	-1.132 to 0.720	No	0.928	9	8	0.551	48
CTL fed vs. CL fed	0.207	-0.669 to 1.082	No	0.916	9	10	0.585	48
CTL fed vs. AN fed	0.504	-0.422 to 1.430	No	0.457	9	8	1.347	48
CL fasting vs. CL fed	0.274	-0.622 to 1.170	No	0.825	10	10	0.785	24
CL fasting vs. AN fasting	-0.195	-1.099 to 0.709	No	0.934	10	8	0.534	48
CL fed vs. AN fed	0.298	-0.606 to 1.201	No	0.804	10	8	0.814	48
AN fasting vs. AN fed	0.766	-0.235 to 1.768	No	0.173	8	8	1.964	24

**Table S4. Evolution of the Glx/Cr ratio in the thalamus.** Two-way repeated measures ANOVA (Interaction:  $F_{(2, 24)} = 0.913$ ,  $P = 0.415$ ; Subjects:  $F_{(2, 24)} = 0.099$ ;  $P = 0.844$ ; Time:  $F_{(1, 24)} = 2.934$ ;  $P = 0.100$ ) followed by a Sidak's multiple comparisons test. CTL, control; CL, constitutional leanness; AN, anorexia nervosa.

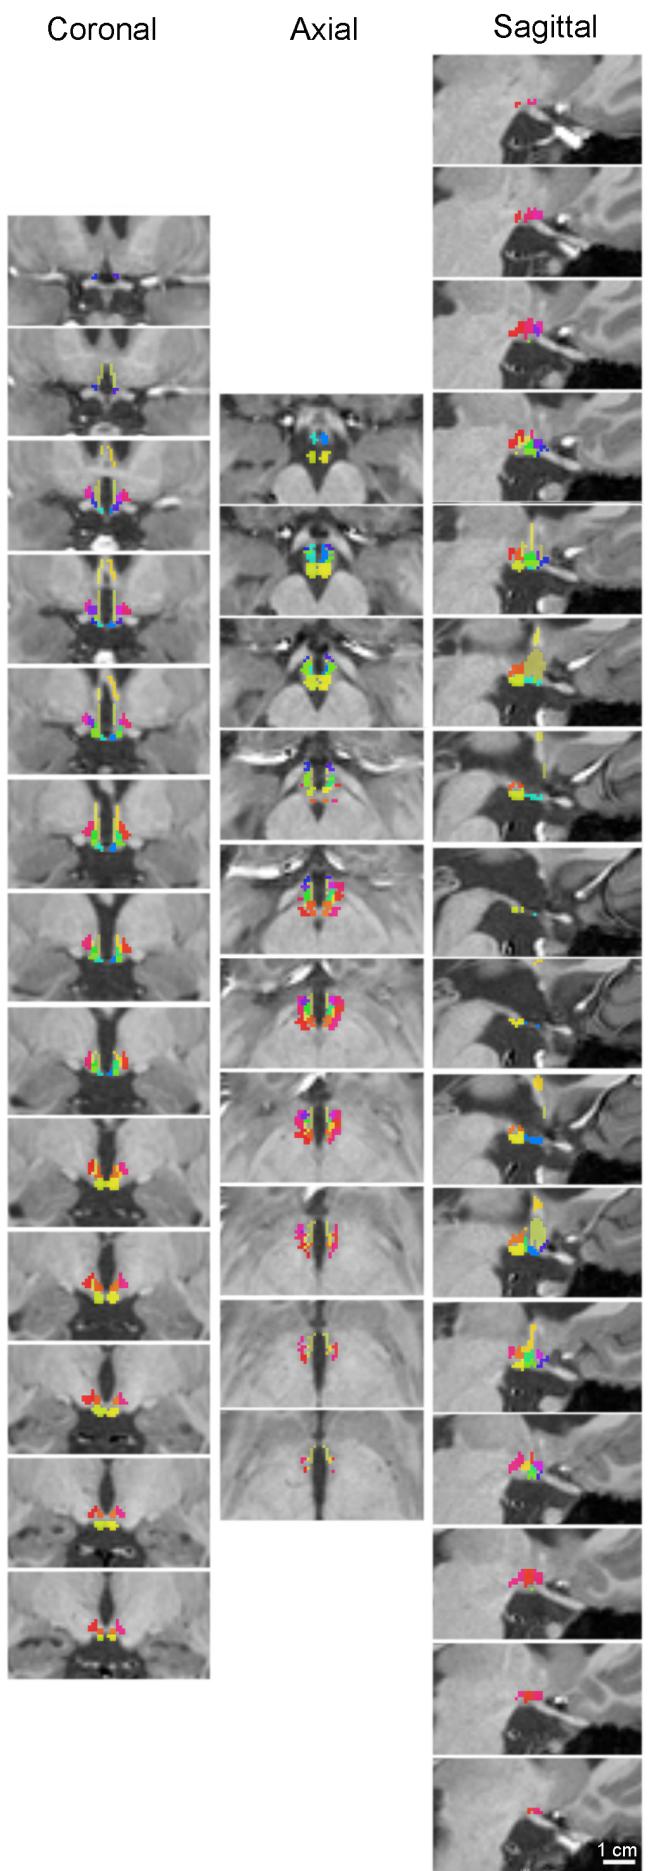

ROI	Comparisons	Mean diff.	95.00% CI of diff.	Significant?	Adjusted P Value	n1	n2	q	DF

**Table S5. Diffusion weighted imaging showing tractography analysis with the number of fibers present in different regions of interest (ROI).** One-way ANOVA followed by a Tukey's multiple comparisons test. CTL, control; CL, constitutional leanness; AN, anorexia nervosa; ARH, arcuate nucleus of hypothalamus; LHA, lateral hypothalamic area; MPO, medial preoptic area; DMH, dorsomedial hypothalamic nucleus; VMH, ventromedial hypothalamic nucleus; PaPe, paraventricular hypothalamic nucleus; PH, posterior hypothalamic nucleus; MR, mammillary region.

## Supplementary Figures

**Figure S1.** Task-based MR spectroscopic analysis of *N*-Acetyl-l-aspartate (NAA), myoinositol (Ins) and choline (Cho) within the hypothalamus (A) and the thalamus (B).

**Figure S2. Segmentation of the hypothalamus in a single subject.** The different regions of the hypothalamus were identified manually from thirteen 1-mm thick T1-weighted anatomical coronal sections using the MRI atlas of the hypothalamus (see reference <sup>13</sup>) for each participant to the study. The color-codes are as follows (LH, left hypothalamus; RH, right hypothalamus; MR, mammillary region; PH, posterior hypothalamic nucleus; LHA<sub>p</sub>, posterior lateral hypothalamic area; VMH, ventromedial hypothalamic nucleus; DMH, dorsomedial hypothalamic nucleus; LHA<sub>t</sub>, tuberal LHA; ARH, arcuate nucleus of the hypothalamus; LHA<sub>a</sub>, anterior LHA; PaPe, paraventricular nucleus; MPO, medial preoptic nucleus; SO, supraoptic nucleus; fx, fornix):

■ MR\_LH: Color Hex color code DDFB00

■ MR\_RH: FFFF00

■ PH\_LH: FF6A00

■ PH\_RH: FF4700
