Data sources

- Government websites - see index for all websites scraped
- Twitter
- Electoral system design database (<https://www.idea.int/data-tools>)
- Manifesto Project Database (<https://manifesto-project.wzb.eu/>)
- Parlgov database (<http://www.parlgov.org/>)
- Chapel Hill Expert Survey (<https://www.chesdata.eu/>)
- Manual addition of electoral periods and legislative period data

Tables

Summary of all tables

Table name	Description
members	All of the member names, taken from official government websites
legislative_periods	The legislative period that the country is in and its electoral details
countries	The countries of which parliamentarians on twitter which are included in the study
parties	The political parties
political_groups	Political groups - only applicable to some cases. Some nations emphasise political groups (coalitions) over party membership
parties_political_groups	This table is the mediating table for the many-to-many relationship between parties and political groups. Parties can change political groups between legislative periods.
parlgov_parties	The database from parlgov.org
mp_data	The database from the manifesto project
ches2014	Data from the Chapel Hill Expert Survey 2014
ches2017	Data from the Chapel Hill Expert Survey 2017
tcat_tweets	Tweet_ids and uids
tcat_mentions	All the tweet_ids from retweets and mentions

tcat_hashtags	All the hashtags & their tweet_ids
---------------	------------------------------------

Individual tables

Members		
The members table can have the same person with two different member ids, but one twitter uid.		
column name	format	description
member_id	int	Primary key identifying each member per legislative period
name	varchar	The name of the politician
party_id	int	Foreign key linking to the parties table
pol_group_id	int	Foreign key linking to the political_groups table
party_pol_group_id	int	Foreign key linking to the parties_political_groups table
chamber	varchar	Whether or not the member is in parliament or the senate
uid	int	The twitter user id
party	varchar	The party name: for readability
name_link	varchar	A link to the individual profile of the member on the government website
function	varchar	The function of the member
region	varchar	Which region the member serves
constituency	varchar	Which constituency the member serves
scraper_url	varchar	The url from the government website that the data was scraped from.
date_of_inactivity	varchar	If a member becomes inactive before the official term ends
country	varchar	Name of the country, for usability

country_id	int	The foreign key linking to the countries table
legislative_period_id	int	The foreign key linking to the legislative_periods table
mp_party_id	int	Links members to mp_data, ches2014, ches2017 and parlgov_parties

legislative_periods		
Column name	format	description
legislative_period_id	int	Primary key identifying each unique legislative period per country.
country_id	int	Foreign key linking to country table
country	varchar	For usability
official_legislative_period	int	(If available) The official legislative period of the country. <i>Note: Some countries don't count this</i>
assigned_legislative_period	int	The legislative period of the country that we have since collection (i.e if it is the first or second [maybe 3rd but that'd be rare] legislative period of the country that we have in the database).
legislative_size	int	The number of people in parliament. From the electoral system design database.
legislative_voting_size	int	The number of people in parliament that vote on legislature. Usually this is the same as the legislative_size.
legislative_start_year	varchar	Starting year of the legislative period
legislative_end_year	varchar	End year of the legislative period
start_election_date	date	The election date of the legislative period
upcoming_election_date	date	The upcoming election date to start the new legislative period
legislative_start_date	date	The date that the new parliament is formed (sometimes differs vastly from the election_date)
legislative_end_date	date	The date that the current parliament is no longer seated (overlaps with the date that the new legislative

		period starts)
chamber	varchar	Whether the entry refers to the parliament or senate
electoral_system_family	varchar	From the electoral system design database.
electoral_system_for_national_legislature	varchar	From the electoral system design database.
tiers	int	The number of legislative voting tiers. From the electoral system design database.
electoral_system_for_president	varchar	From the electoral system design database.
is_current	bool	Whether the legislative period is currently active.

countries		
Column name	format	description
id	int	Primary key
country	varchar	Name of the country
country_abbr	varchar	2 character abbreviation for the country
lower_chamber_name	varchar	Name of the lower chamber (if applicable)
upper_chamber_name	varchar	Name of the upper chamber (if applicable)

parties		
Column name	format	description
party_id	int	Primary key
party	varchar	Party name
party_abbr	varchar	Abbreviation for the party (e.g. PVV)
country	varchar	For usability
country_id	int	Foreign key linking to country table

mp_party_id	int	Foreign key linking to the manifesto project table
is_nationalist	bool	(From Wiki) Indicates nationalist parties

political_groups		
Column name	format	description
pol_group_id	int	Primary key
political_group	varchar	Political group name
legislative_period_id	int	Foreign key to legislative_periods table
country	varchar	For usability
country_id	int	Foreign key to countries table

Parties_political_groups		
Column name	format	description
party_pol_group_id	int	Primary key
party_id	int	Foreign key linking to the party table
party	varchar	For readability
country	varchar	Easier querying
country_id	int	Foreign key to countries table
political_group	varchar	For readability
Political_group_id	int	Foreign key linking to political_groups table

Parlgov_parties

The parlgov_parties table is the database downloaded from the parliaments and governments database

Column name	format	description
cmp	int	Foreign key linking to mp_data table (links to the mp_party_id), can also be linked to mp_party_id in parties table
For other columns see: http://www.parlgov.org/#documentation		

Mp_data

The mp_data table is the database downloaded from the manifesto project

Column name	format	description
mp_party_id	int	Foreign key linking to parties table
For other columns, see: https://manifesto-project.wzb.eu/tutorials/main-dataset		

ches2014

The ches2014 table is the database downloaded from the chapel hill expert survey

Column name	format	description
mp_party_id	int	Foreign key linking to parties table
For other columns, see: https://www.chesdata.eu/2014-chapel-hill-expert-survey		

ches2017

The ches2017 table is the database downloaded from the chapel hill expert survey

Column name	format	description
mp_party_id	int	Foreign key linking to parties table
For other columns, see: https://www.chesdata.eu/1999-2014-chapel-hill-expert-survey-ches-trend-file-1		

tcat_tweets		
Column name	format	description
id	int	Tweet id, primary key
created_at	date	Date the tweet was created
from_user_name	varchar	Screenname of the user
from_user_id	int	Twitter id of the user Foreign key: links to members table
to_user_id	int	The id of the person being mentioned (in the case of @mention)
to_user_name	varchar	The screenname contained in the @mention
in_reply_to_status_id	int	Original tweet id if the tweet is a reply to another

tcat_mentions		
Column name	format	description
id	int	Primary key
from_user_name	varchar	The person who is doing the retweeting
to_user	varchar	Source account of the original retweet
tweet_id	int	Tweet id from twitter
created_at	date	Date the tweet was created
from_user_id	int	Twitter id of the user Foreign key: links to members table
to_user_id	int	User id of the original retweet Foreign key: links to members table
is_retweet	bool	1 for retweet, 0 for mention
from_leg_period	int	Legislative period of the retweeter/mentioner Foreign key: links to legislative_periods table (legislative_period_id)

to_leg_period	int	Legislative period of the retweeted/mentioned Foreign key: links to legislative_periods table (legislative_period_id)
---------------	-----	---

tcat_hashtags		
Column name	format	description
id	int	Primary key
tweet_id	int	Id of the tweet that contains the hashtag
created_at	date	Date the tweet was created
from_user_name	varchar	The person who is tweeting
from_user_id	int	Twitter id of the user Foreign key: links to members table
text	varchar	The hashtag only

Example Queries

Note: in order for these queries to work, you will have to create your own table of re-hydrated tweets from the tweet_ids.csv

Count number of tweets per politician

```
select
    from_user_id, count(*),
    country
from
    tcat_tweets tt
where
    tt.created_at between '2018-01-01' and '2018-12-31'
group by
    uid,
    country;
```

Getting a RT network for Australia

```
#get node data
select
    m.uid
    m.name as label,
    p.party,
    m.country,
    concat(m.country, ' ', lp.chamber, ' ', lp.legislative_period_id) country_chamber_period,
    concat(m.country, ' ', p.party) country_party,
    lp.legislative_period_id,
    m.party_pol_group_id,
    m.constituency,
    mp.corpusversion,
    mp.mp_country,
    mp.rile,
    mp.is_latest,
    mp.is_current,
    mp.oecdmember,
    mp.eumember,
    mp.mp_party_id,
    mp.partyname,
    mp.partyabbrev,
    mp.parfam,
    lp.electoral_system_family,
```

```

lp.chamber,
p.is_nationalist
from
members m,
parties p,
legislative_periods lp,
mp_data mp
where
m.party_id = p.party_id
and mp.mp_party_id = p.mp_party_id
and m.country_id = p.country_id
and lp.legislative_period_id = m.legislative_period_id
and mp.is_current = TRUE
and m.uid is not null
and m.country = 'Australia';

#get edge data
select
tm.from_user_id,
tm.to_user_id,
tm.from_country_id,
tm.to_country_id,
tm.from_leg_period,
tm.to_leg_period,
count(1) cnt
from
tcat_mentions tm
INNER JOIN legislative_periods lp on
lp.legislative_period_id = tm.from_leg_period
INNER JOIN legislative_periods lp2 on
lp2.legislative_period_id = tm.to_leg_period
where
tm.is_retweet = true
and extract(year
from
tm.created_at) = 2018
and tm.from_chamber = 'Parliament'
and tm.to_chamber = 'Parliament'
and country = 'Australia'
group by
from_user_id,
to_user_id;

```
