

SI2-SSI (2020): FAMII: High-Performance and Scalable Fabric Analysis, Monitoring and Introspection Infrastructure for HPC and Big Data PI: Dhabaleswar K. (DK) Panda, Co-PIs: Karen Tomko, Hari Subramoni, Heechang Na Institutions: The Ohio State University

Proposed Framework

Award #: OAC-1664137

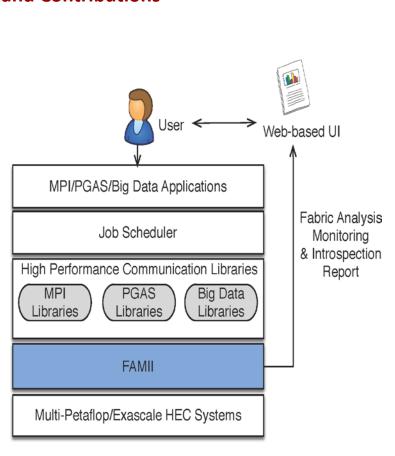

Research Challenges

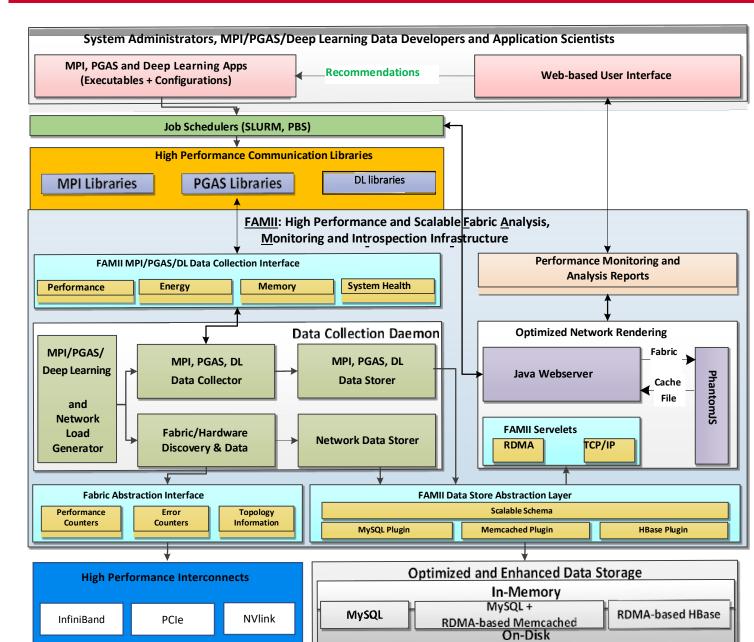

Broad Challenge

Can a high performance and scalable tool be designed which is capable of analyzing and correlating the communication on the fabric with behavior of HPC/Big Data/Deep Learning applications through tight integration with the communication runtime and the job scheduler?

Research Challenges and Contributions

- 1. Enhance gathering, storing, retrieving, and visualization of the metrics for large and complex HPC networks with low latency
- 2. Introduce MPI T event-based metrics for point-to-point and collective MPI communication patterns
- 3. Design a profile-enabled communication library to gather GPU and MPI performance counters using CUPTI and MPI T interfaces, respectively
- 4. Present a real-time and low-overhead profiler tool to correlate MPI-level with network-level metrics

The Proposed Performance Monitoring, Analysis, and Introspection Framework

Usage Scenarios

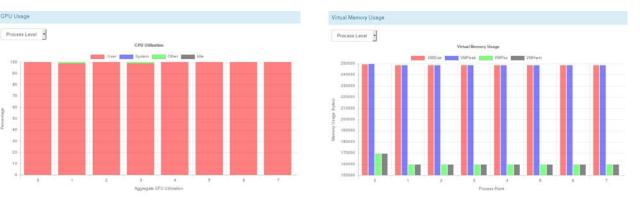

Identifying and Analysing Sources of Interconnect and Link Congestion

Monitoring Jobs Based on Various Metrics

Job ID 🕴	CPU User Usage 🕴	Virtual Memory Size	Total Communication	Total Inter Node	Total Intra Node 🕴	Total Collective	RMA Sent

270748	99	15.12 Mb	149.98 Gb	58.23 Gb	91.76 Gb	102.78 Gb	0.00 bytes
270749	99	30.39 Mb	151.23 Gb	58.35 Gb	92.88 Gb	100.34 Gb	0.00 bytes
270759	99	17.99 Mb	58.71 Gb	37.29 Gb	21.43 Gb	303.73 Kb	0.00 bytes
270765	99	9.42 Mb	32.52 Gb	23.19 Gb	9.33 Gb	0.00 bytes	0.00 bytes

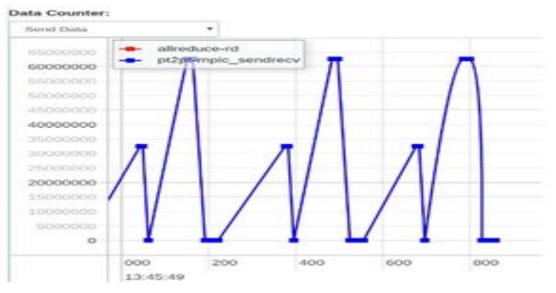

Profiling and Reporting Performance Metrics at Different Granularities

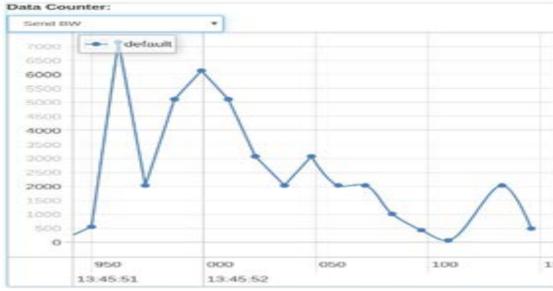

MPI T Introspection

Phases in Intra-node GPU Metric Collection

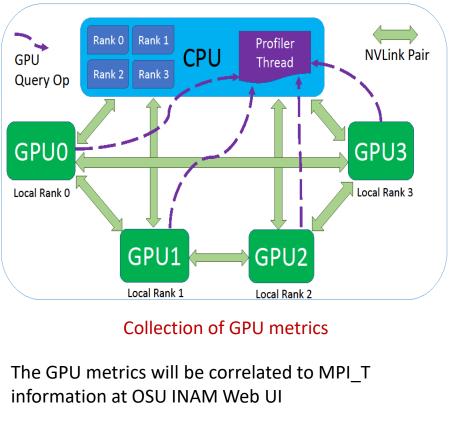

- Startup: Each rank discovers the topology and updates shared region. Then, one rank per node setups and starts a profiler thread on CPU to profile all GPUs on the node once using GPUs.
- Query: The profiler thread profile all enrolled GPUs based on user defined interval and send data to OSU INAM periodically
- Exit: Once the ranks stop using device, profiler thread will perform one last read and send data then exit.

Screenshot of PVAR Chart. The X-axis represents current time and Y-axis represents the number of bytes sent over the network to the OSU INAM daemon

Screenshot of NVLink Metrics chart for TensorFlow. The X-axis represents time and Y-axis represents the link bandwidth utilization

Scalability of the Design

• Each node aggregates and sends the GPU and PVAR metrics to the OSU INAM daemon • The metrics scale linearly based on the number of GPUs per node

job/node/cluster level

Enhanced Fabric Discovery and Port Metrics Inquiry

Challenges and Solutions

Designing a low overhead and scalable tool to discover the fabric topology and gather fabric metrics is a burdensome task since it involves 1) profiling of the data and aggregation, 2)

Designing a Profiling and Visualization Tool for Scalable and In-Depth Analysis of High-Performance GPU Clusters, P. Kousha, B. Ramesh, K. Kandadi Suresh, C. Chu, A. Jain, N. Sarkauskas, D. Panda, IEEE HiPC, Dec 2019

Network View with expanded and hidden modes showing Ohio Supercomputer Center (OSC) with 3 heterogeneous clusters all connected to the same InfiniBand Fabric (114 switches and 1,428 compute nodes connected through 3,402 links)

storing and 3) rendering the data.

Interval to read the hardware counters should be low to ensure they do not overflow • Uses different levels of threading, bulk insertions and deletions for storing, and parallel

components for Fabric Discovery and Port Metric Inquiry

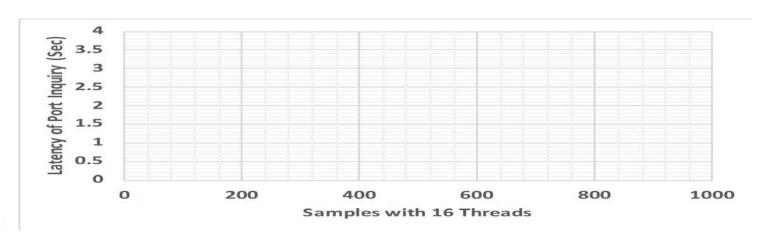

Performance Evaluation

Enhanced performance for fabric discovery using optimized OpenMP-based multi-threaded designs with **14x** speedup

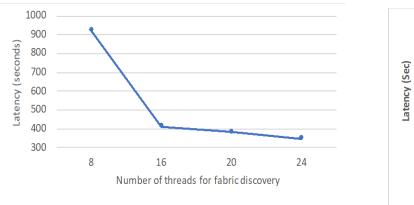

Ability to gather InfiniBand performance counters at sub-second granularity for very large (>2,000 nodes) clusters

NETWORK AND LIVE JOBS VIEW GENERATION TIMING ON OSC WITH 1K JOBS

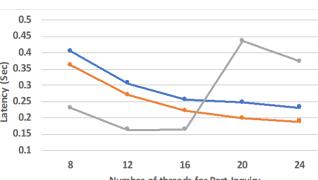

View	Average	Min	STDEV.p	
Network View	196.15 ms	187 ms	206.09 ms	5.75 ms
Live Jobs View	18.17 ms	16 ms	20 ms	1 ms

Impact of multi-threading on Fabric Discovery module on OSC cluster

Impact of multi-threading on Port Inquiry module on OSC cluster

operation

• A. Ruhela, H. Subramoni, S. Chakraborty, M. Bayatpour, P. Kousha, and DK Panda, Efficient Design for MPI Asynchronous Progress without Dedicated Resources, Parallel Computing - Systems & Applications, Volume 85, July 2019.

Software Release, Community Engagement and Metrics

• A v0.9.5 release of OSU INAM has been made on Jan'20 Ohttp://mvapich.cse.ohio-state.edu/tools/osu-inam/

OMore than 600 downloads with support for PBS and SLURM

- This release has been installed at OSC and OSU to monitor clusters
- Tutorials at SC '19, ISC'19, HiPEAC '20, MUG'19
- Community Engagement with: NOAA, U. of Utah, CAE Services @ Germany, Pratt & Whitney, Ghent University @ Germany, and Cyfronet @ Poland

Future Work

• As part of future work we aim to:

OExtend data collection daemon to further intra-node metrics, intra-node communication matrix, and power metrics

OSupport to profile multiple MPI libraries through MPI_T interface **O**Extend support for introspection of PGAS and DL applications

Supported by: OAC-1664137
