

DIBBs: Creating a Digital Environment for Data-Driven Science (DEEDS)

PI: AC Catlin Co-PIs: A. Alam, M. Sepúlveda, J. Francisco, K. Gallant

Institutions: Purdue University, University of Pennsylvania, University of Minnesota

Award #: 1724728

The DEEDS Challenge

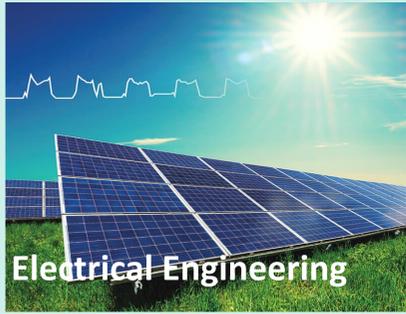

Make our services so valuable, so indispensable that **researchers from all science domains** (*) will commit to **using cyberinfrastructure to support their entire research process end-to-end** – to benefit their own research effort and to promote more effective reuse and reinterpretation across scientific communities. **With DEEDS, your data, computing and workflows come together in datasets that you build, use and share across your entire investigation lifecycle.**

(*) including the vast number of scientists who have never used cyberinfrastructure of any kind to support their research.

A Convergence Infrastructure

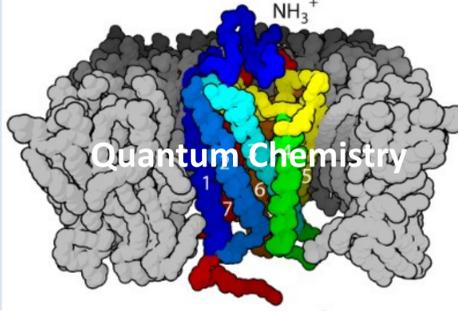

Innovation in data, computing, analysis & workflows that is effective across science domains

Electrical Engineering

diagnosis of solar PV system efficiency

file upload/classification, file import from duramat, jupyter curation tools, suns-vmp model research code & HPC execution– share, view, explore, disseminate

Quantum Chemistry

vibrational theory of receptor protein activation

file upload/classification, Gaussian HPC execution, novel log post-processor for vibrational/thermochemical/charge data & depolarization plots– share, view, explore, disseminate

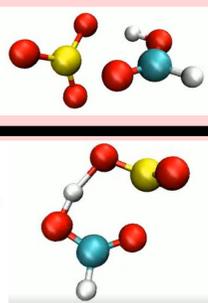

Environmental Science

PFAS toxicity reference values for aquatic exposure

complex data models as data tables with services (transformation of instrument output, validation) metadata, file upload/classification, ANOVA models, analytics– share, view, explore, disseminate

Molecular Dynamics

organic acid - SO3 reaction

file upload/classification, CP2K HPC execution, novel post-processor for distance & orientation computations, VMD videos– share, view, explore, disseminate

Global Ecology

tree species diversity in the Anthropocene

training & mapping datasheets to interactive data tables (11M rows), machine learning models, geotiff files & tile generation, spatial overlays & marker linkage to data tables– share, view, explore, disseminate

Civil Engineering

rural bridge health monitoring

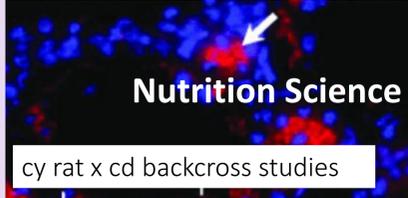

NBI inspection datasheets to data tables with services (transformation, validation), file upload for 1M photos, figures, reports, analytics, jupyter trend analysis– share, view, explore, disseminate

Earthquake Engineering

building reconnaissance

Nutrition Science

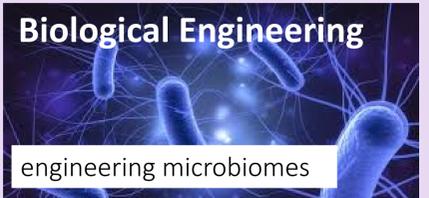

cy rat x cd backcross studies

Biological Sciences

RNA seq muscle regeneration

Biological Engineering

engineering microbiomes

The DEEDS dashboard: collection, preservation, sharing, computing workflows, provenance, viewing, dissemination

Cases

Files

DataTables

Tools

Analytics

Explore

Project Organization

Define
Annotate
Metadata
spatial, temporal, keywords, source, researchers, ...

File Repository

Upload

Exploration & Publication

DataView
Technology
view, navigate, search, filter, link, download ...
Visualization
applications mapped to file classification
Exploration
linkage across all elements of dataset, customized data table viewer, hierarchy navigation, geospatial overlays
FAIR Compliance
reuse, reinterpretation

The dashboard screenshot shows several key features:

- SMARTI National Bridge Inventory Dataset:** A table listing bridge cases with columns for ID, Case Name, Case ID, and Description. A highlighted entry shows "20,000 rural bridges in Nebraska".
- ecotoxicology file repository:** A section for managing files, with a highlighted "ecotoxicology file repository".
- berries & bone data tables for subject specimen measures:** A section for managing data tables, with a highlighted "berries & bone data tables for subject specimen measures".
- analyzing bacterial growth:** A graph showing bacterial growth curves over time.
- exploring global tree biodiversity:** A map showing global tree biodiversity data.
