

# The Molecular Sciences Software Institute

OAC-1547580

- Investigators: T. Daniel Crawford (Virginia Tech), Cecilia Clementi (Rice U.), Robert Harrison (Stony Brook U.), Teresa Head-Gordon (U.C. Berkeley), Shantenu Jha (Rutgers U.), Anna Krylov (U. Southern California), Theresa Windus (Iowa State U.), and Dominika Zgid (U. Michigan)
- Designed to serve and enhance the software development efforts of the broad field of computational molecular science, the MolSSI's goal is to enable new science by raising the bar for software development in the molecular sciences.
- The MolSSI includes a team of a dozen Software Scientists developing software infrastructure and help to develop best practices and standards for the global molecular sciences community.
- The MolSSI currently supports nearly 30 Software Fellows – graduate students and postdocs – across the U.S., with 60 supported over the life of the program.
- The MolSSI provides training opportunities via workshops, summer schools, and on-line resources in modern software engineering methods.
