

Figure S6. Effect of wind speed. Relationship between the probability of detecting harbour porpoise and mean hourly wind speed at the near C-POD (dark grey) and at the remote C-POD (light grey). Solid lines denote predictions from top ranked models presented in Table 1, while coloured dashed lines represent standard errors. The vertical dotted lines delineate Beaufort wind categories (0-1: calm to light air, 2-3: light to gentle breeze, 4: moderate breeze, 5: fresh breeze, 6: strong breeze, 7: high wind/moderate gale/near gale, 8: gale/fresh gale).
