Online Supplement Table 1. Compounds included in Targeted Sim Analyses.

Given are the abbreviated names as used in the manuscript, the full name of each compound with according CAS numbers. Further details are the detection of the compounds in either the PTX001 plastic mixture or in PS foam, the match of the compound according to the NIST library, the ions detected ranked from the most abundant one and the RT (minutes).

| nr | Compound abbreviation | Compound full name | CAS | Known uses | Found in | Match % | Ions (m/z) | RT (minutes) |
|----|---|---|------------|--|----------|---------|-----------------------------|--------------|
| 1 | Acetophenone | Acetophenone | 98-86-2 | Precursor to resins/copolymers used in coatings, inks and adhesives. | PS, PTX | 95;97 | 105, 77, 120 | ± 12.18 |

Online Supplement Table 2. Overview on leaching behavior

Leaching behavior of 15 additives identified for this study in three different experiments. For the definition of the three treatments please see OS 3. Leaching observations for the LTE have been split in 2 phases, 0-14 days and 14 to 90 days. During the LTR no 0 day measurement was analyzed, here the changes in relation to the controls are described. Terms used to describe the graphs are our subjective interpretations of sometimes highly complex patterns. We have attempted to make this as consistent as possible. To allow readers to form their own opinions all details are specified in the graphs, the associated tables and original data (OS Table 4).

| | |
|------------------------|---|
| 'Leach' | -> increase in relation to earlier sampling points/control |
| 'Increase' | -> increase in control in relation to earlier sampling points/control |
| 'Decrease' | -> decrease in relation to earlier sampling points/control |
| 'Stable' | -> no change in relation to earlier sampling points/control |
| 'No effect' | -> no detectable change at all |
| 'Stable but irregular' | -> in general stable but variation in individual measurements |
| 'Irregular' | -> moderate variation in some individual measurements |
| 'Chaotic' | -> high variation in measurements |

Online Supplement 3. Detailed graphs of each compound

Each compound detected in the two plastic types (PTX001 and PS) are discussed in detail and graphs visualize the leaching processes. Stomach oil exposure were conducted in duplicate, two bottles contained the same type and amount of plastics. These two bottles are represented as two sampling points at the same sampling time. From each of those two bottles, 3 subsamples were retrieved, indicated by the error bars of each sampling point. The connections between the sampling points show linear trendlines.

The 'long-term experiment (LTE)': Oil samples collected and analyzed on day 0 (control only), and next after 14 and 90 days, with controls repeated at both dates.

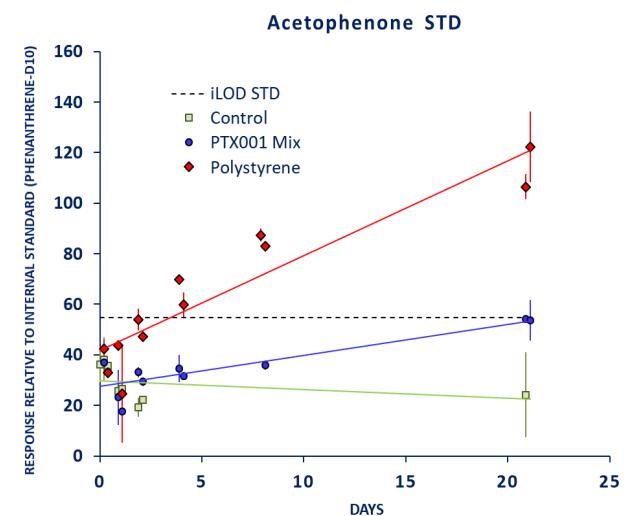

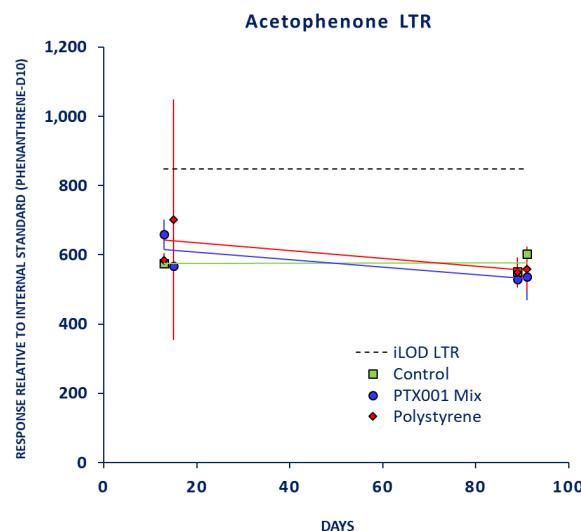

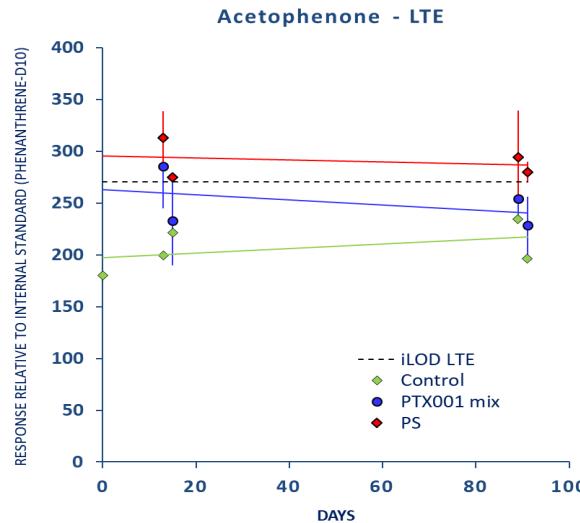

The 'short-term detailed experiment (STD)': Replicated the LTE setup, but with an adapted GC-MS analysis method (see below) and conducted over a shorter timescale. STD oil samples were taken on day 0 (control) and next after 8 hours and 1, 2, 4, 8, and 21 days. Controls were measured in the first three and last samples.

The 'long-term replicate experiment (LTR)': These analyses represented a check on the replicability of the initial and adapted CG-MS methods. The 14-day, 90-day and control samples from the LTE were re-analyzed with the adapted GC-MS method.

3.1. Acetophenone

Full name: Acetophenone

Known use: Precursor to resins/copolymers used in coatings, inks and adhesives

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|---|----------------------------|---|-----------|---|-------------------------|----|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | + | stable | 0 | no effect | 0 | no effect | 0 | moderate leach | + |
| PS | leach | + | stable | 0 | no effect | 0 | no effect | 0 | strong leach | ++ |
| Control | increase | + | stable | 0 | | | stable | 0 | stable but irregular | 0 |

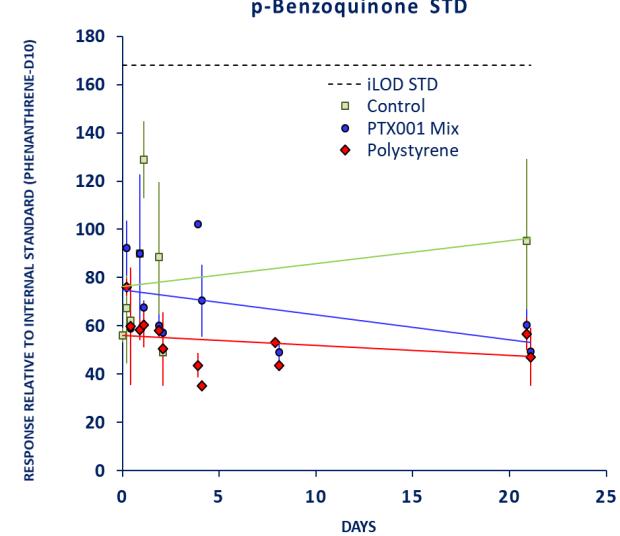

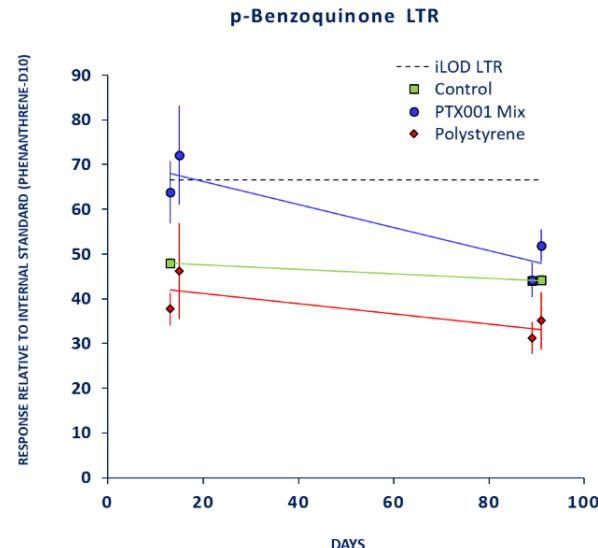

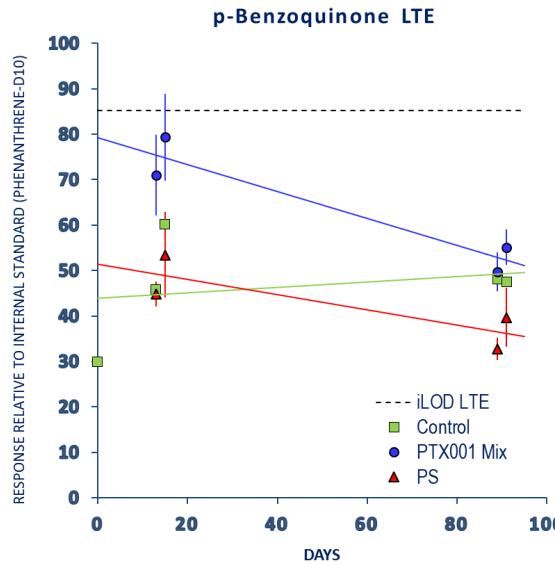

Conclusion

PTX: moderate leach in initial weeks, then stable or minor decrease (+)

PS: strong leach in initial weeks, then stable or minor decrease (++)

3.2. *p*-Benzoquinone

Full name: 2,5-Cyclohexadiene-1,4-dione, 2,6-bis(1,1-dimethylethyl)
Known use: used in polymer synthesis

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|----|-----------|----|----------------------------|----|-----------|----|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | ++ | decrease | -- | leach | ++ | decrease | -- | chaotic | ? |
| PS | no effect | 0 | decrease | - | no effect | 0 | decrease | - | chaotic | ? |
| Control | increase | + | stable | 0 | | | stable | 0 | chaotic | ? |

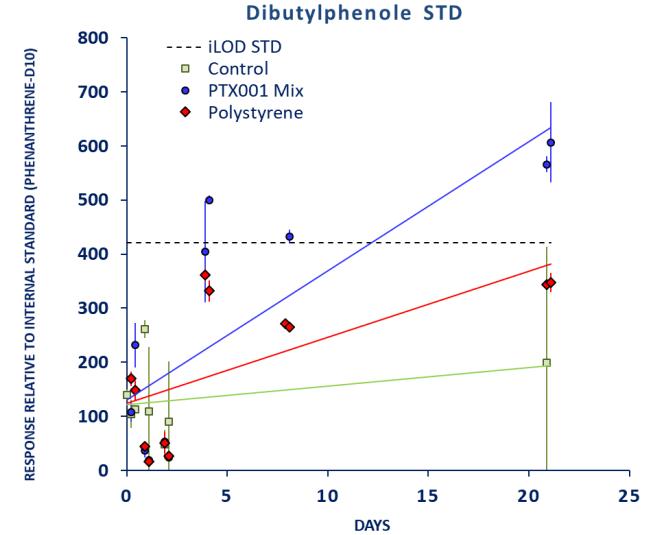

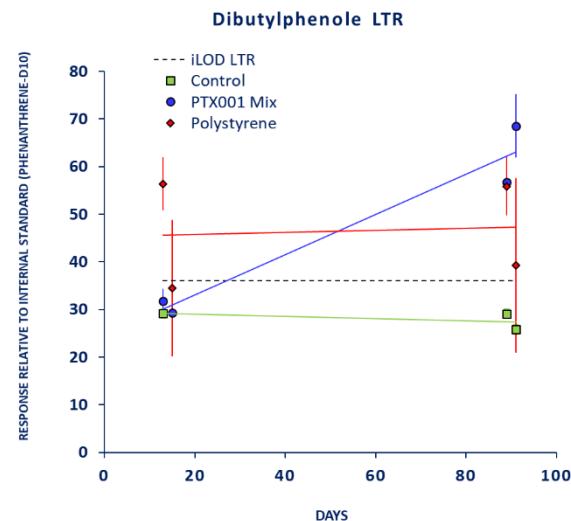

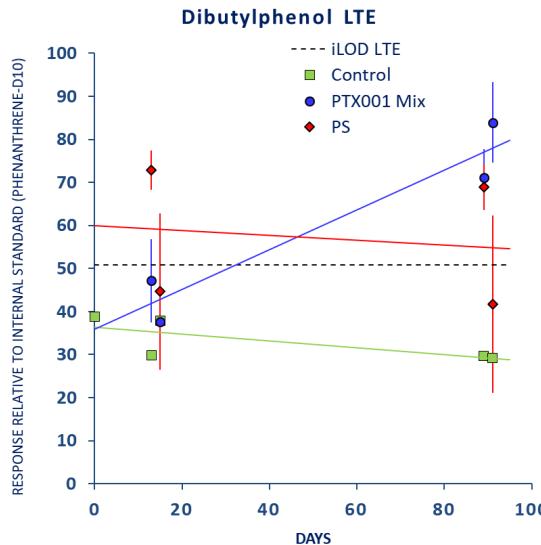

Conclusion

PTX: strong increase in initial weeks followed by disappearance at 90 days (++)

PS: no initial effect, and slightly decreasing on long term (0)

3.3. Dibutylphenol

Full name: 2,4-Di-tert-butylphenol
Known use: Antioxidant

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|----|----------------------------|---|-----------|----|--------------------------|----|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | + | leach | ++ | leach | 0 | leach | ++ | leach, irregular pattern | ++ |
| PS | leach | + | stable | 0 | leach | + | stable | 0 | leach, irregular pattern | + |
| Control | stable | 0 | stable | 0 | | | stable | 0 | stable but irregular | 0 |

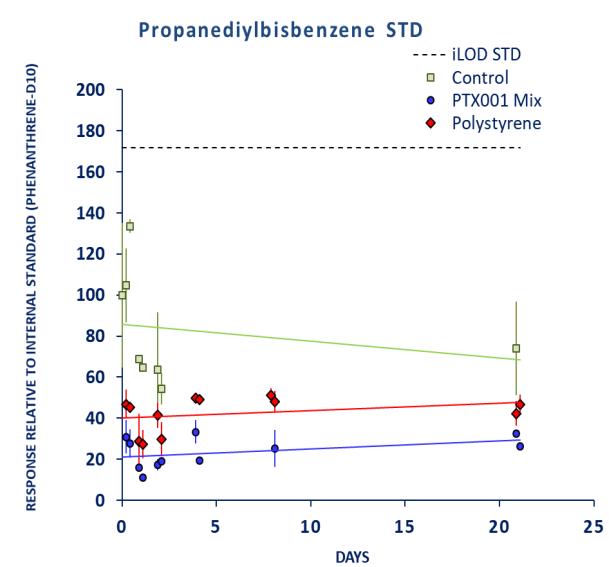

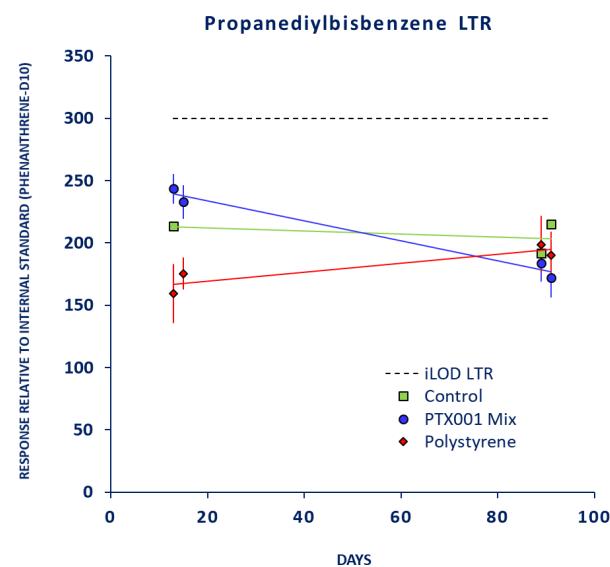

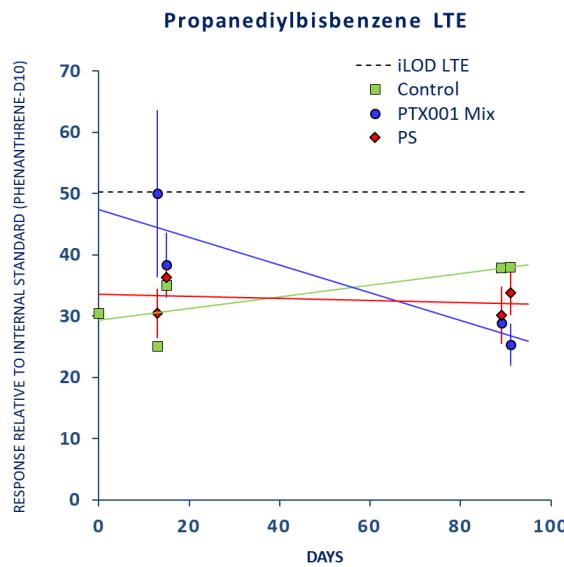

Conclusion

PTX: persistent leaching to day 90 (++)

PS: initially leaching but not persisting on long term (+)

3.4. Propanediylbisbenzene

Full name: Benzene, 1,1'-(1,3-propanediyl)bis-
Known use: ?

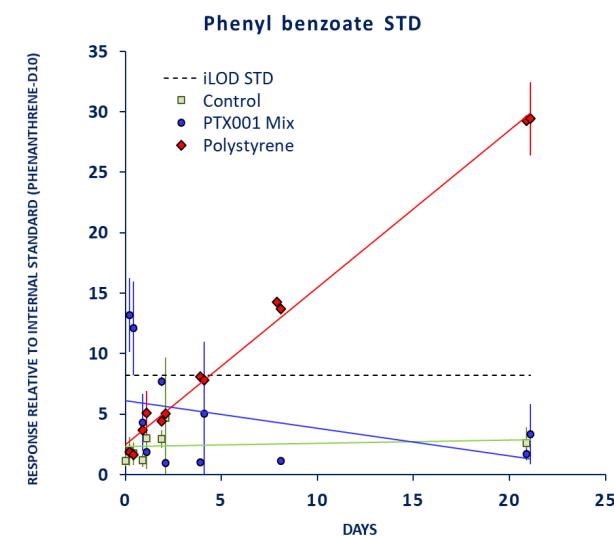

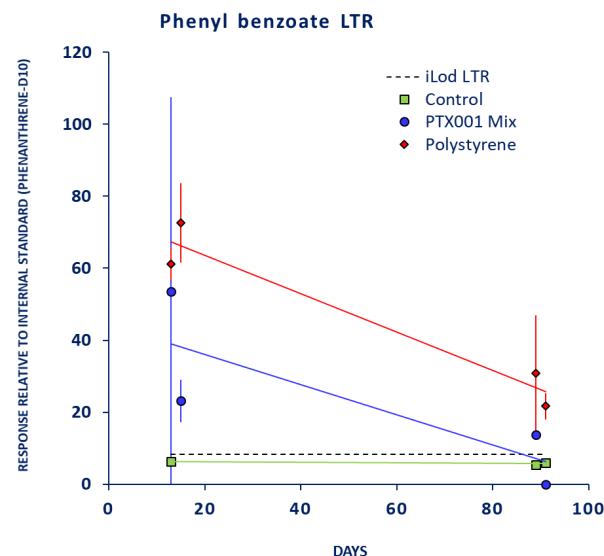

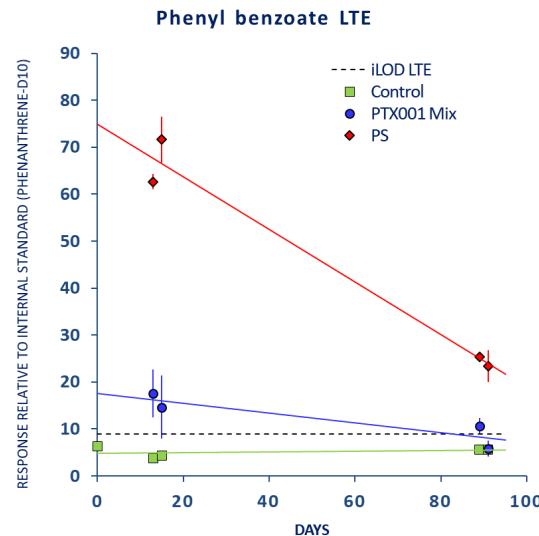

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|----|----------------------------|---|-----------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | + | decrease | -- | no effect | 0 | decrease | - | no effect | 0 |
| PS | no effect | 0 | stable | 0 | no effect | 0 | stable | 0 | no effect | 0 |
| Control | stable | 0 | stable | 0 | | | stable | 0 | stable but irregular | 0 |

Conclusion

PTX: possibly light initial leach, but unclear pattern (0)
 PS: no indications for leaching (0)

3.5. Phenyl benzoate

Full name: Benzoic acid, phenyl ester
Known use: Preservative used in cosmetics, films, foods

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|----|-----------|----|----------------------------|----|-----------|----|-------------------------|----|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | moderate leach | + | decrease | - | leach | + | decrease | - | no effect | 0 |
| PS | strong leach | ++ | decrease | -- | strong leach | ++ | decrease | -- | strong leach | ++ |
| Control | stable | 0 | stable | 0 | | | stable | 0 | stable | 0 |

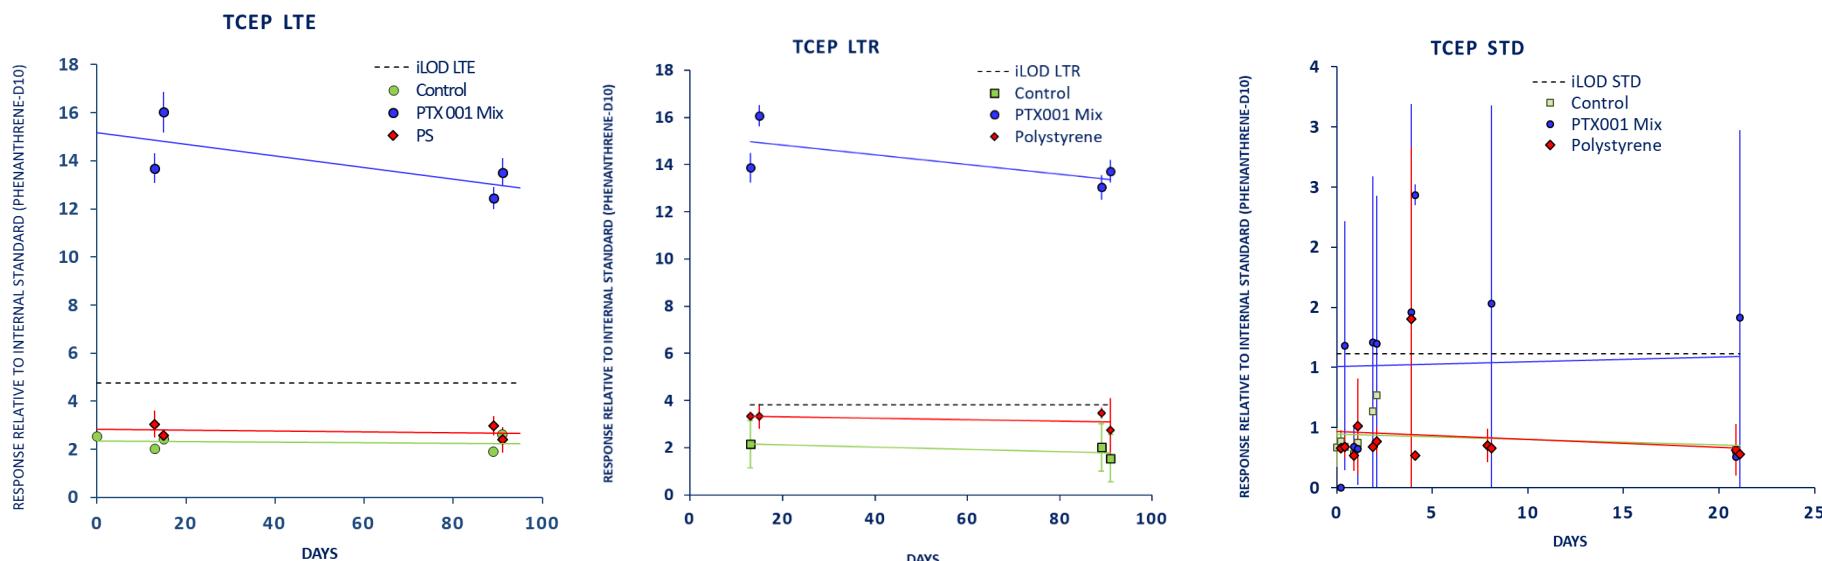

Conclusion

PTX: possibly minor initial leach, but disappears afterwards (0)

PS: strong leaching in first few weeks, but compound then largely disappears (++)

3.6. TCEP

Full name: Tri(2-chloroethyl) phosphate
Known use: Plasticizer, flame retardant, viscosity regulator

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|----|-----------|---|----------------------------|----|-----------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | strong leach | ++ | stable | 0 | strong leach | ++ | stable | 0 | leach irregular pattern | + |
| PS | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 |
| Control | stable | 0 | stable | 0 | | | stable | 0 | stable | 0 |

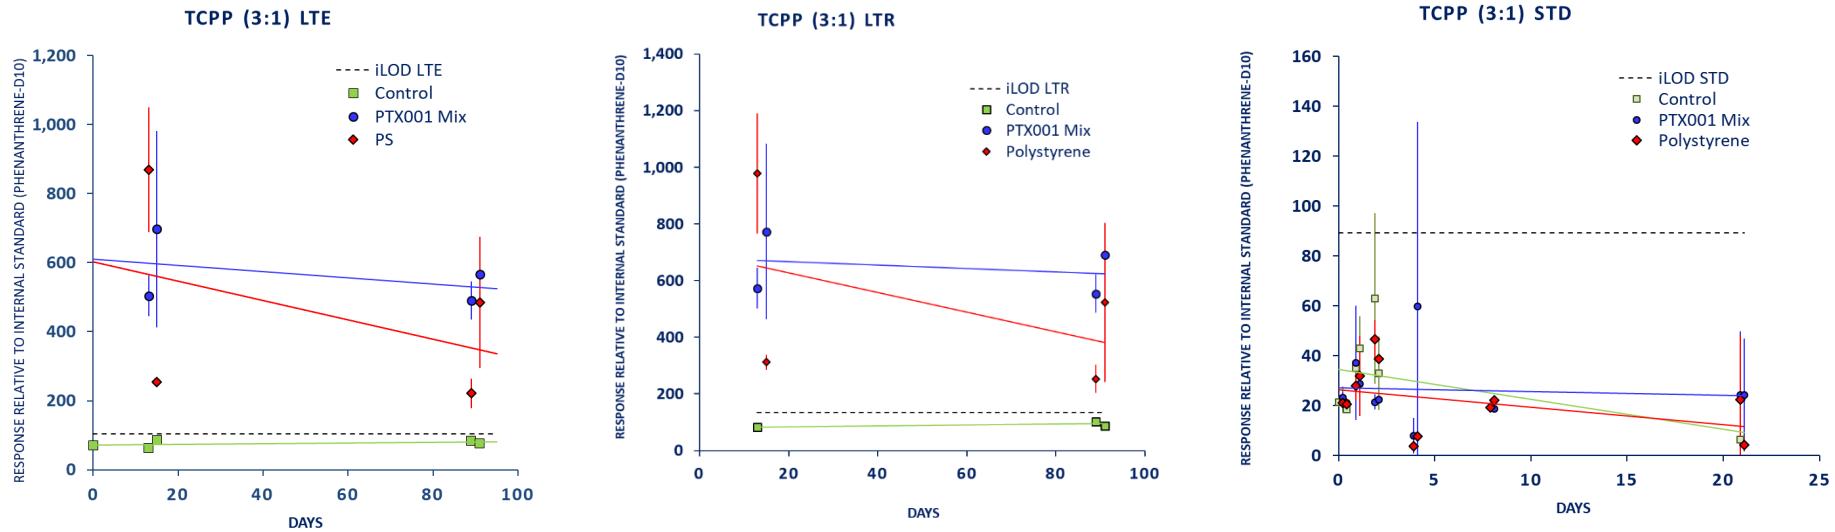

Conclusion

PTX: rapid initial leaching then more or less constant on longer term (++)

PS: no indications for leaching (0)

3.7. TCPP (3:1)

Full name: 2-Propanol, 1-chloro-, phosphate (3:1)
Known use: Flame retardant

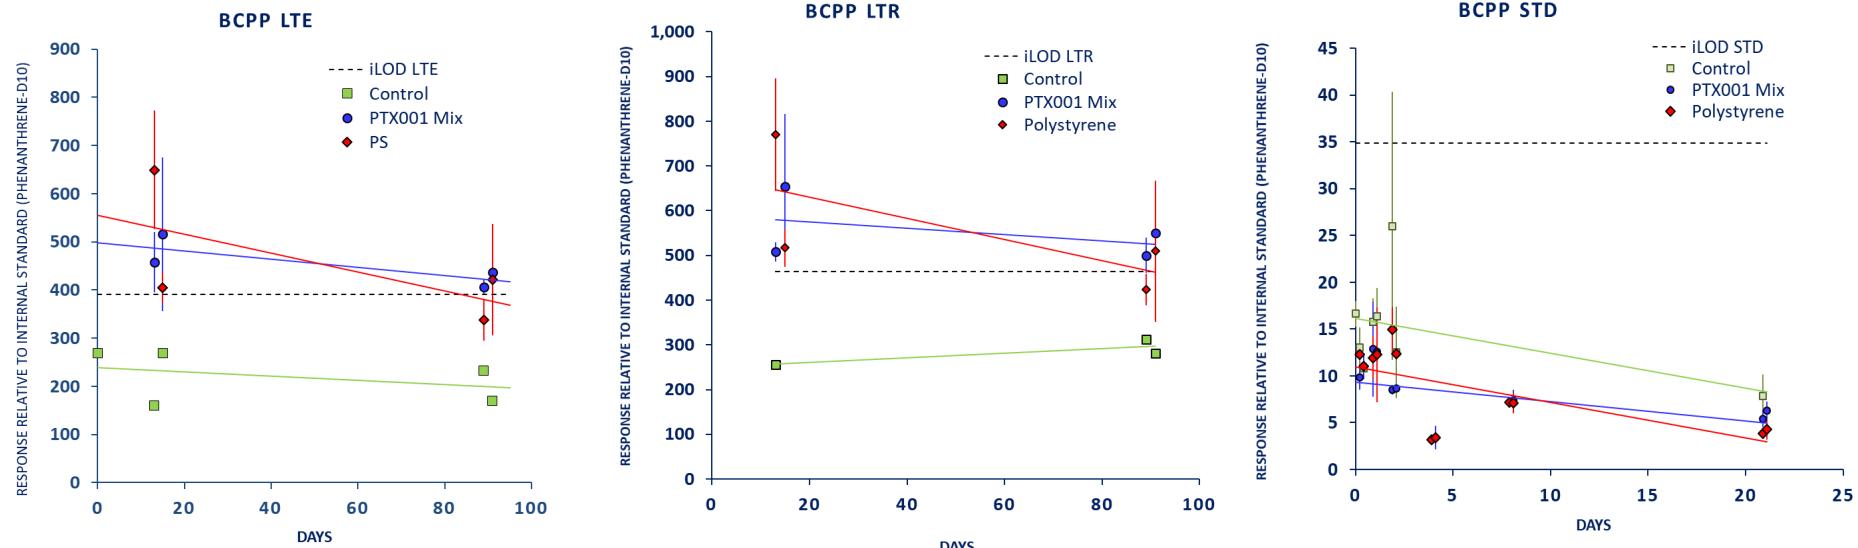

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | | |
|---------------------------|----------------------------|----|-----------|---|----------------------------|----|-----------|---|-------------------------|---|--|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | | |
| PTX | leach | ++ | stable | 0 | leach | ++ | stable | 0 | chaotic | ? | |
| PS | leach | + | decrease | - | leach | + | decrease | - | chaotic | ? | |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic | ? | |

Conclusion

PTX: initially leaches and remains constant on longer term (+)
 PS: variable data, possibly slight initial leach but disappears (0)

3.8. BCPP

Full name: Bis(3-chloro-1-propyl)(1-chloro-2-propyl)phosphate
Known use: ?

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|----|-------------------|---|----------------------------|----|-------------------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | ++ | stable | 0 | leach | ++ | stable | 0 | chaotic | ? |
| PS | leach | ++ | moderate decrease | - | leach | ++ | moderate decrease | - | chaotic | ? |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic | ? |

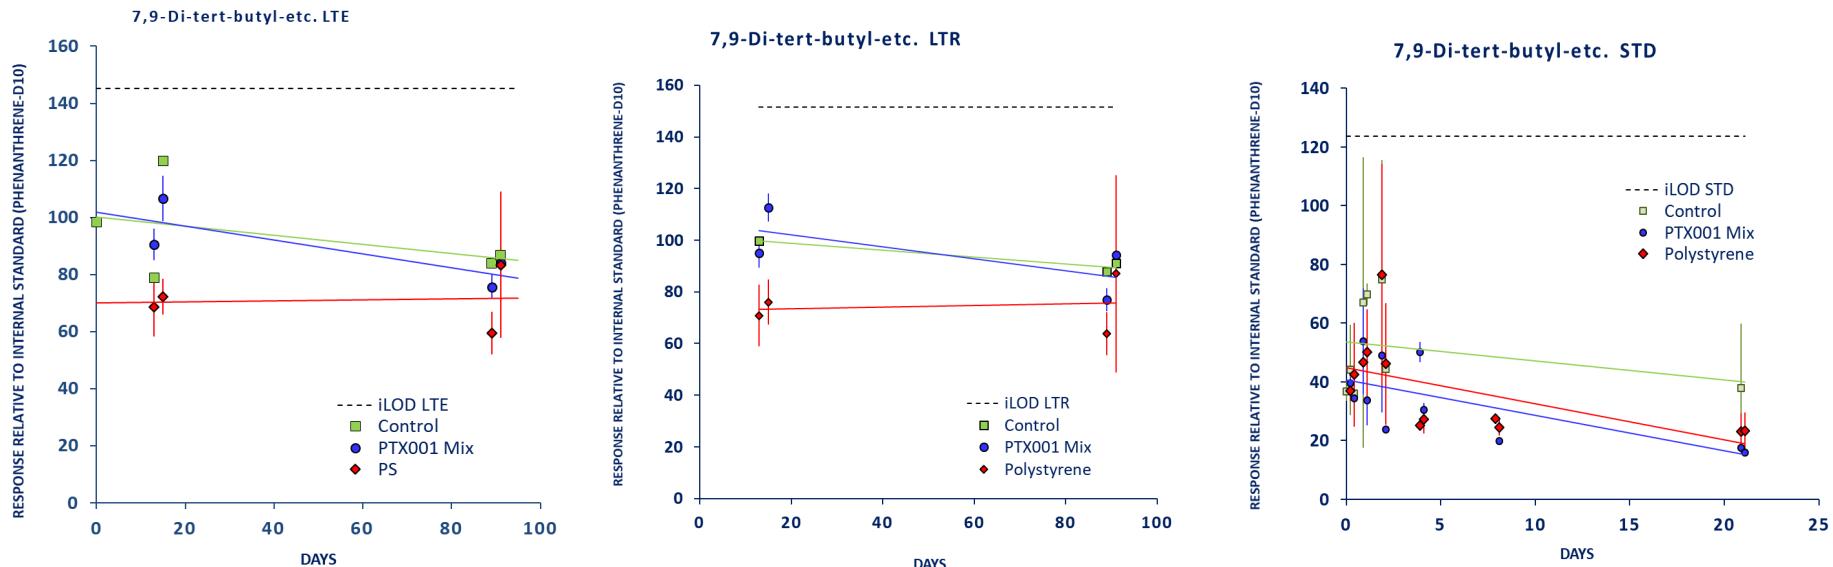

Conclusion

PTX: leaches in first weeks, but then stabilizes (++)

PS: leaches in first weeks, then slightly decreases (++)

3.9. 7,9-Di-tert-butyl-1-oxaspiro(4,5)deca-6,9-diene-2,8-dione

Full name: 7,9-Di-tert-butyl-1-oxaspiro(4,5)deca-6,9-diene-2,8-dione
Known use: anti-oxidant (degradation product)

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|---|----------------------------|---|-----------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | chaotic | ? |
| PS | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | chaotic | ? |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic | ? |

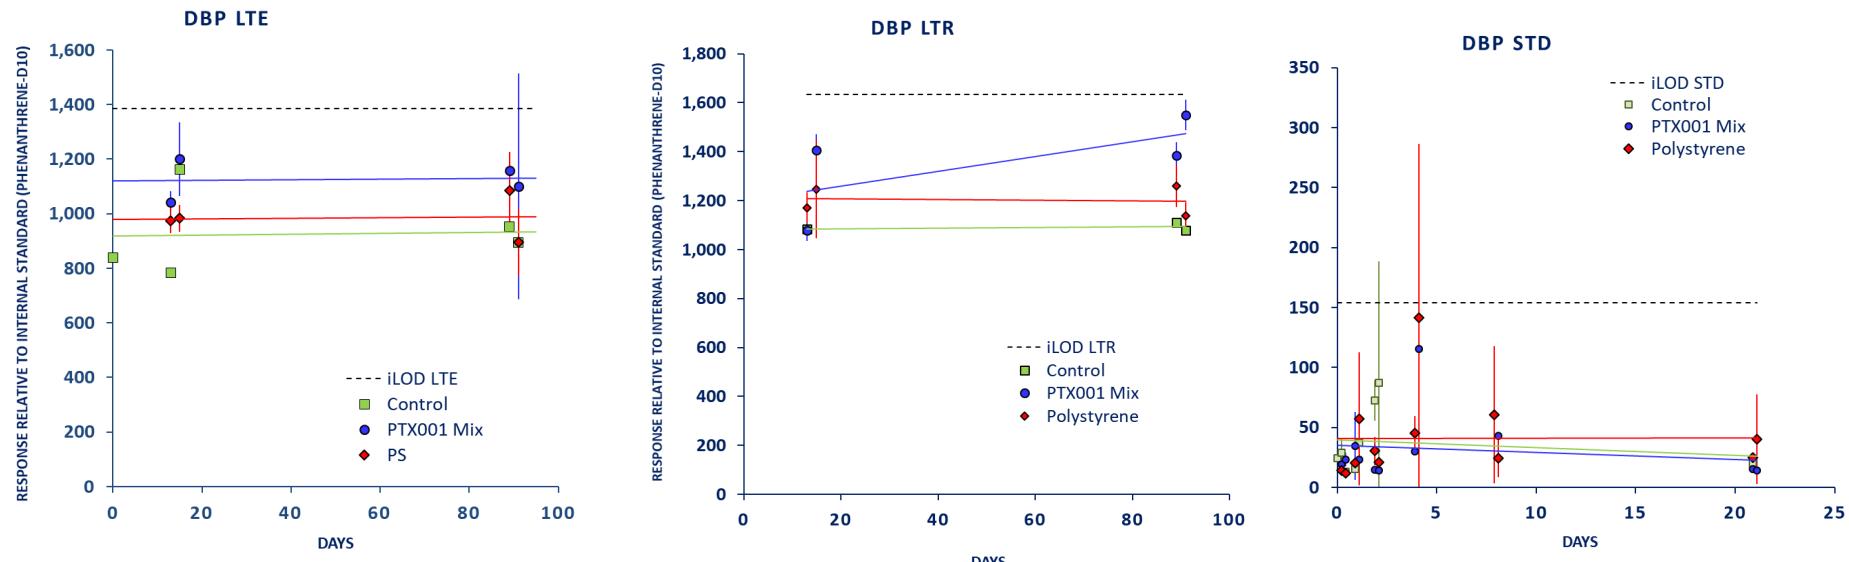

Conclusion

PTX: no evidence for leaching (0)

PS: no evidence for leaching (0)

3.10. DBP

Full name: Dibutyl phthalate
Known use: Plasticizer

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|---|----------------------------|---|----------------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | moderate leach | + | stable | 0 | moderate leach | + | moderate leach | + | chaotic | ? |
| PS | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | chaotic | ? |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic | ? |

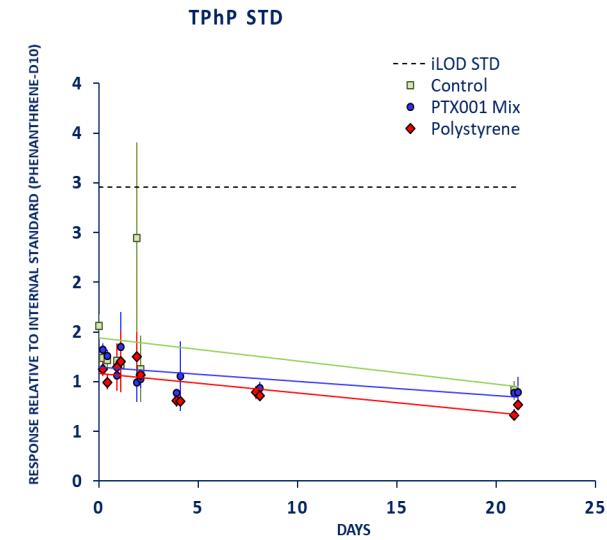

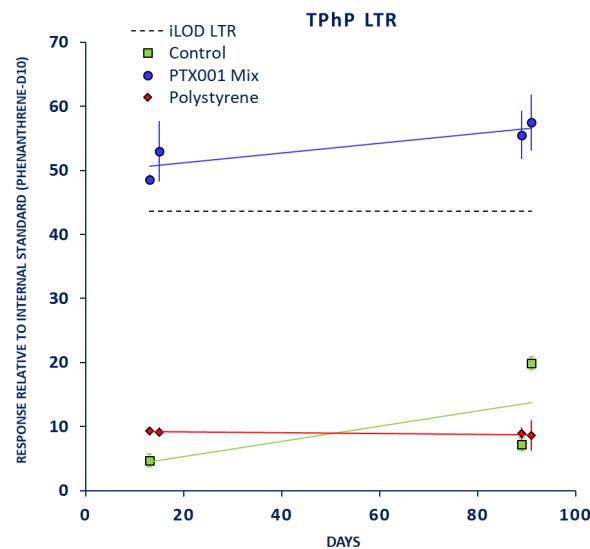

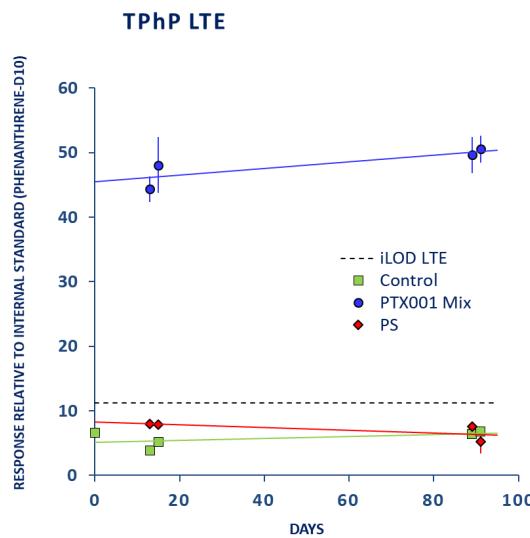

Conclusion

PTX: moderate leaching at most (+)

PS: no evidence of leaching (0)

3.11. TPhP

Full name: Triphenyl phosphate
Known use: Plasticizer and flame retardant

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|----|---------------|---|----------------------------|----|---------------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | strong leach | ++ | slow increase | + | strong leach | ++ | slow increase | + | no effect | 0 |
| PS | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 |
| Control | stable | 0 | stable | 0 | | | increase | + | chaotic | ? |

Conclusion

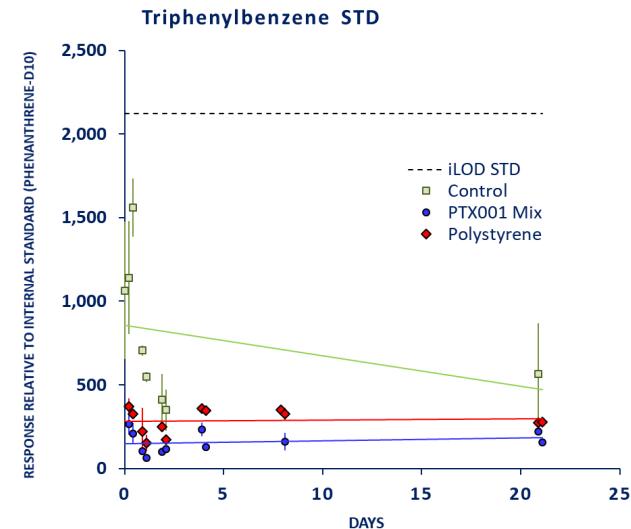

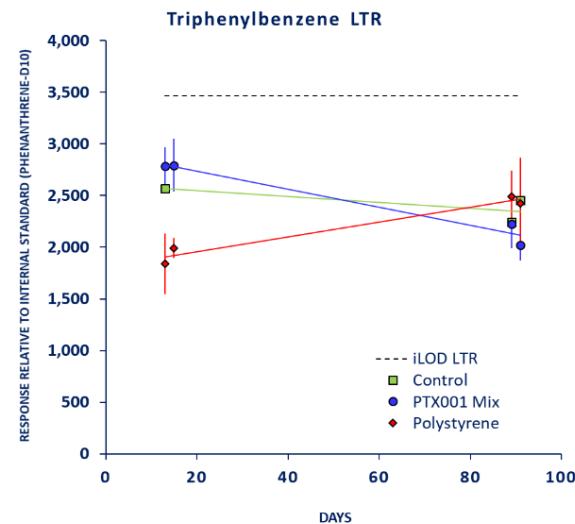

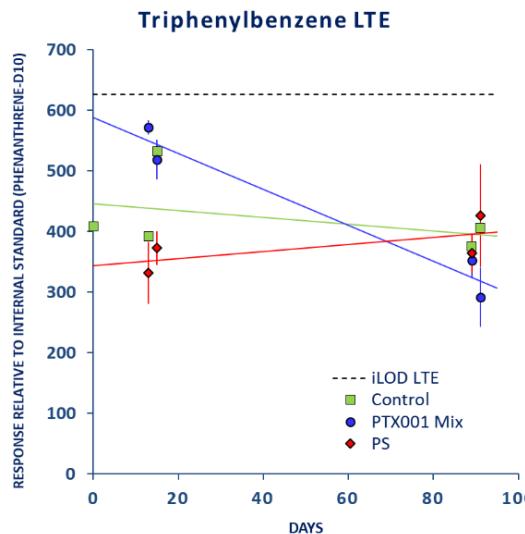

PTX: rapid initial leaching continues but slows down on long term (++)

PS: no evidence for leaching (0)

3.12. Triphenylbenzene

Full name: Cyclohexane, 1,3,5-triphenyl

Known use: packaging migration residue; Polystyrene impurity

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|----|----------------------------|---|-----------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | + | decrease | -- | no effect | 0 | no effect | 0 | no effect | 0 |
| PS | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic | ? |

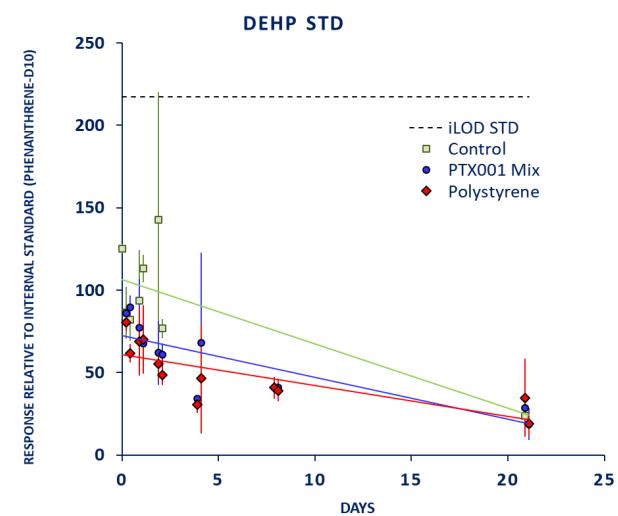

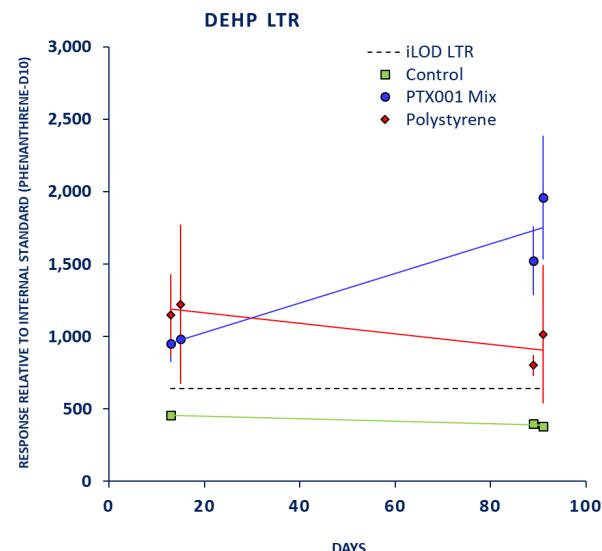

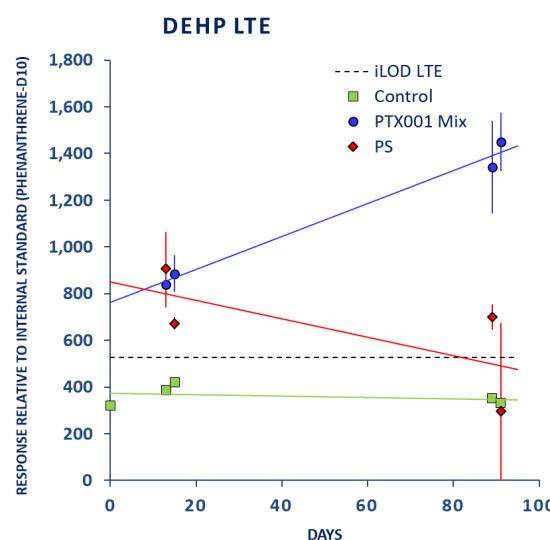

Conclusion

PTX: no evidence for leaching (0)

PS: no evidence for leaching (0)

3.13. DEHP

Full name: Bis(2-ethylhexyl) phthalate
Known use: Plasticizer

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|-----------|---|----------------------------|---|-----------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | leach | + | leach | + | leach | + | leach | + | chaotic decrease | ? |
| PS | leach | + | decrease | - | leach | + | decrease | - | chaotic decrease | ? |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic decrease | ? |

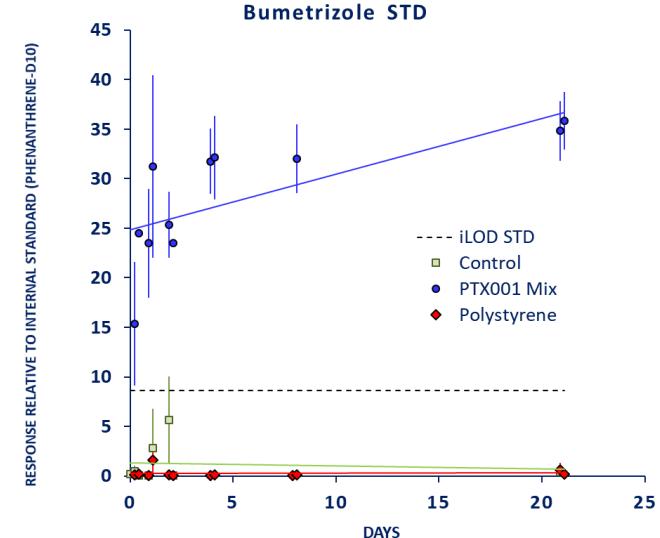

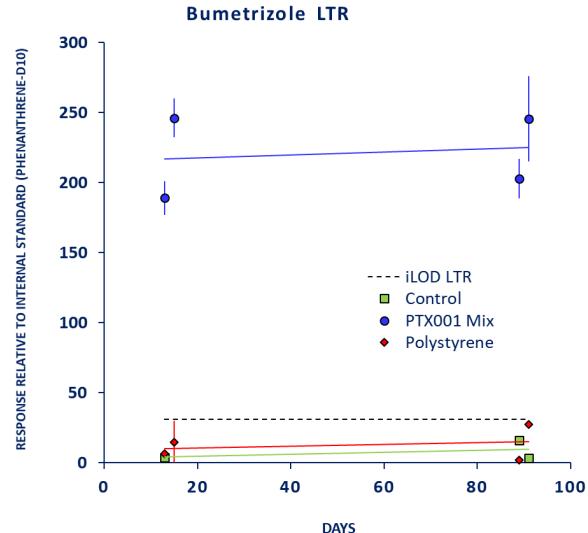

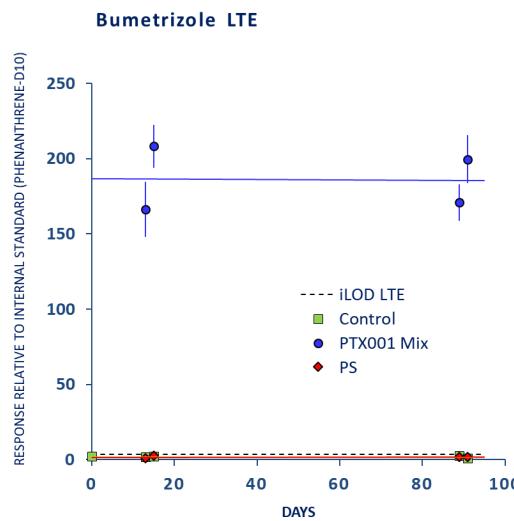

Conclusion

PTX: long term continued leaching (++)

PS: initial slight leaching, but reduces on longer term (+)

3.14. Bumetizole

Full name: Bumetizole
Known use: UV Stabilizer

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|----|-----------|---|----------------------------|----|-----------|---|-------------------------|----|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | strong leach | ++ | stable | 0 | strong leach | ++ | stable | 0 | very rapid strong leach | ++ |
| PS | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 | no effect | 0 |
| Control | stable | 0 | stable | 0 | | | stable | 0 | stable | 0 |

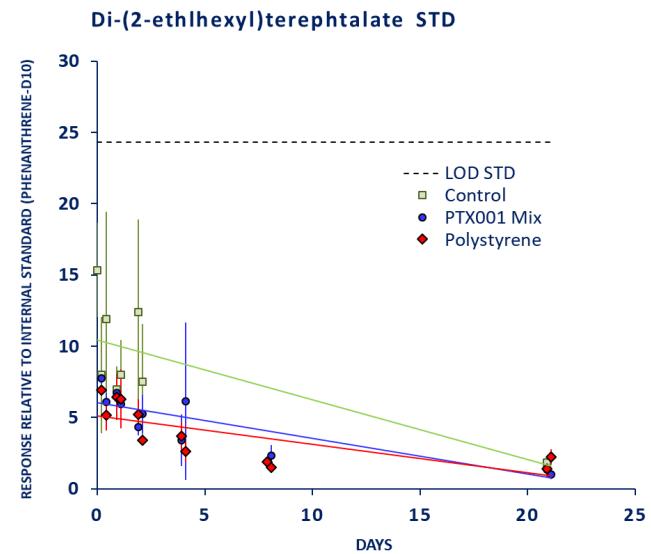

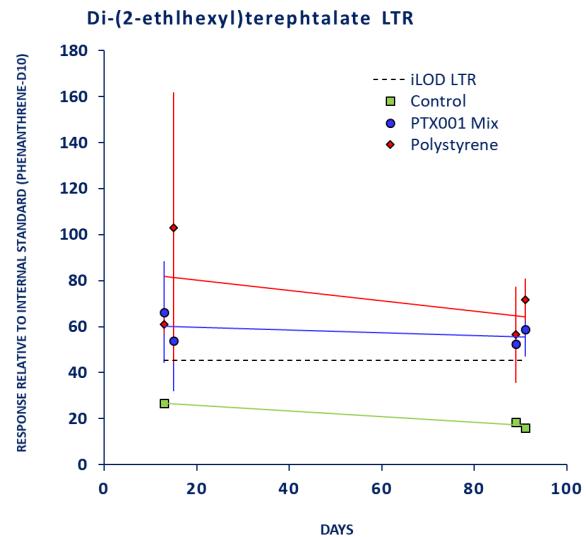

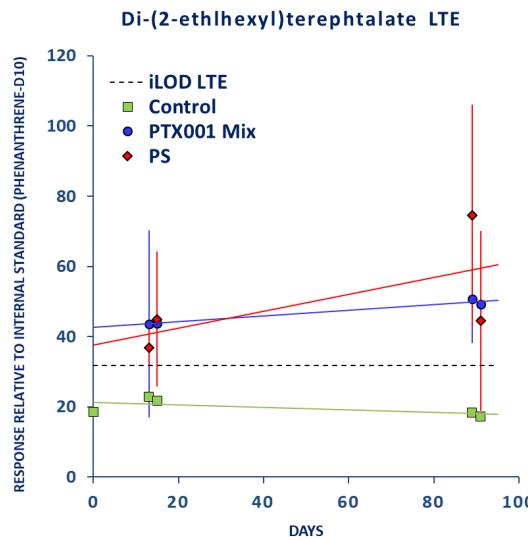

Conclusion

PTX: long term continued leaching (++)

PS: initial slight leaching, but reduces on longer term (+)

3.15. Di-(2-ethylhexyl)terephthalate

Full name: 1,4-Benzenedicarboxylic acid, bis(2-ethylhexyl) ester
Known use: Plasticizer

| Oil leach behaviour from: | LTE (Long-term Experiment) | | | | LTR (LT Replicate) | | | | STD (Short-term Detail) | |
|---------------------------|----------------------------|---|----------------|---|----------------------------|---|-----------|---|-------------------------|---|
| | 0-14 day | | 14-90 day | | 14 day relative to control | | 14-90 day | | 0-21 day | |
| PTX | moderate leach | + | stable | 0 | moderate leach | + | stable | 0 | chaotic decrease | ? |
| PS | moderate leach | + | moderate leach | + | moderate leach | + | stable | 0 | chaotic decrease | ? |
| Control | stable | 0 | stable | 0 | | | stable | 0 | chaotic decrease | ? |

Conclusion

PTX: moderate leaching quickly stabilizes (+)

PS: moderate leaching unclear on longer term (+)

Online Supplement Table 4. Original data

Original data where the results and the graphs in the manuscript and the Online Supplement are based on. Replicates were sampled in parallel, therefore, sampling dates are spread over 2 days to enhance visualization. Averages (avg) and standard deviation (\pm sd) are derived from three subsamples.

1. Acetophenone

Online Supplement Table 5. Additives detected in PTX001 microplastic mixture during initial analysis (Kühn et al. 2018).

Reproduced from: Kühn S, van Oyen A, Booth AM, Meijboom A, van Franeker JA (2018) Marine microplastic: Preparation of relevant test materials for laboratory assessment of ecosystem impacts. Chemosphere 213: 103-113 doi <https://doi.org/10.1016/j.chemosphere.2018.09.032>

| Compound Name | CAS No. | Common Name/Abbreviation | Percentage match (NIST) | Comments |
|---|-------------|--------------------------|-------------------------|---|
| 1,2,4-trimethylbenzene | 95-63-6 | Pseudocumene | 80 | Possible source from printing inks |
| 1-Pentene, 4,4-dimethyl-1,3-diphenyl-1-(trimethylsilyloxy)- | n/a | n/a | 83 | |
| 1-(4-methylphenyl)pentan-1-one | 1671-77-8 | 4'-methyl valerophenone | 81 | |
| 1-(1'-pyrrolidinyl)-2-butanone | n/a | n/a | 80 | |
| 2,4-Di-tert-butylphenol | 96-76-4 | 2,6-DTBP | 91 | UV stabiliser and antioxidant |
| 2,4-dimethyldecane | 2801-84-5 | n/a | 84 | Linked to production of tributylphosphate plasticiser |
| Tri(2-chloroethyl) phosphate | 115-96-8 | TCEP | 84 | Flame retardant, plasticiser and viscosity regulator |
| 3,7-dimethylnonane | 17302-32-8 | n/a | 81 | |
| Tris(2-chloro-1-methylethyl) phosphate | 13674-84-5 | TCPP | 93 | Flame retardant |
| Bis(3-chloro-1-propyl)(1-chloro-2-propyl)phosphate | 137888-35-8 | n/a | 86 | Flame retardant |
| Dibutyl phthalate | 84-74-2 | DBP | 94 | Plasticiser or possible printing ink |
| Triphenyl phosphate | 115-86-6 | TPhP | 87 | Plasticiser and flame retardant |
| 2-Ethylhexyl diphenyl phosphate | 1241-94-7 | Octicizer | 80 | Plasticiser and flame retardant |
| Phthalic acid, di(6-methylhept-2-yl) ester | n/a | n/a | 80 | Plasticiser |
| Dicyclohexyl phthalate | 84-61-7 | Morflex® 150 | 84 | Plasticiser and UV stabiliser |
| Bis(2-ethylhexyl) phthalate | 117-81-7 | DEHP | 96 | High volume production plasticiser |

| | | | | |
|--|------------|-----------------------|----|--|
| Diisooctyl phthalate | 27554-26-3 | DIOP | 93 | High volume production plasticiser or possible printing ink. Also used as glue in PU- PVA-based colour binders |
| 5-methyl-2-phenyl-1H-indole | 13228-36-9 | n/a | 80 | Indoline substances are used as colorants |
| 2-tert-Butyl-6-(5-chloro-2H-benzotriazol-2-yl)-4-methylphenol | 3896-11-5 | Bumetrizole | 86 | Antioxidant used to slow the oxidation process of the polymer exposed to UV light. |
| 1,4-Benzenedicarboxylic acid, bis(2-ethylhexyl) ester | 6422-86-2 | Diethyl terephthalate | 92 | Non-phthalate plasticiser used in PVC, PMMA and PS. |
| (Z)-9-Octadecenamide | 301-02-0 | Oleamide | 80 | Lubricant in PE and PP manufacture |

Online Supplement Table 6. Additive properties

Chemical properties and estimated biodegradability, bioaccumulation and biotransformation rates according to BIOWIN.

| nr | CAS number | Substance short name | Mw (g/mol) | log Kow | Ready biodegrada- bility | BC (L/kg wet weight) | Biotrans- formation half-life (days)* |
