

Map consists of 50 x 50 (= 2500) cells, each 1400 x 1400 m square

Tsetse species: *Riverine sp.*

Location in relation to the climatic limits of the species: 'Well inside'

Population density:

The colour of each cell indicates the density in that cell as a percentage of the greatest density in any cell of the map.

Overall, the tsetse density is within the 'Medium' range for the species.

Area to be baited
