Contents

Figure S1. Chromatograms for the same sample before (A) and after (B) removal of lock spray scans as examples.

Figure S2. Validation of the PLS-DA model using the 100 permutation test. The Y-intercept of R^2 and Q^2 indicate 0.719 and -0.248, respectively.

Table S1. Number of peaks detected, peak-groups, IP-clusters, and predictions in negative and positive modes.

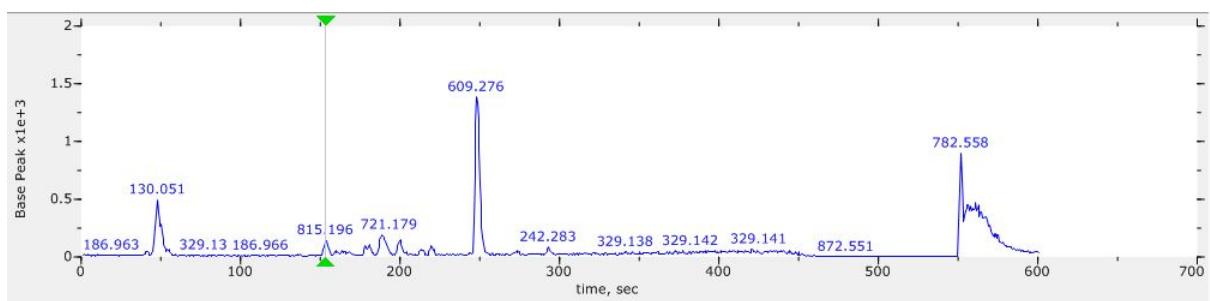

Figure S1. Chromatograms for the same sample before (A) and after (B) removal of lock spray scans as examples.

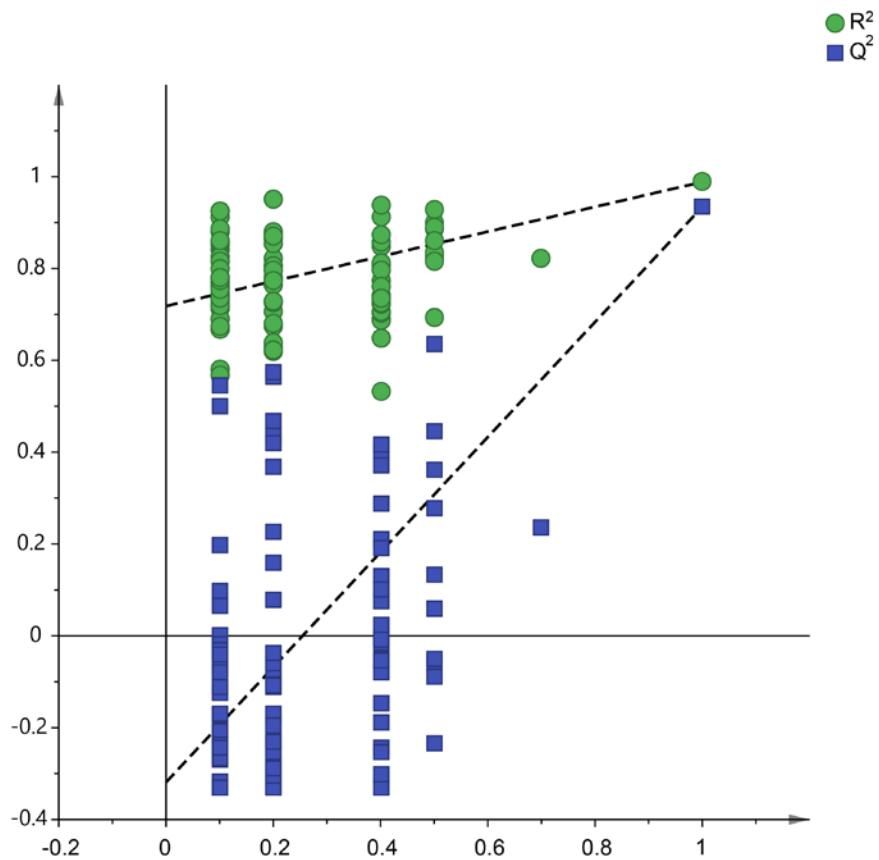

Figure S2. Validation of the PLS-DA model using the 100 permutation test. The Y-intercept of R^2 and Q^2 indicate 0.719 and -0.248, respectively.

Table S1. Number of peaks detected, peak-groups, IP-clusters, and predictions in negative and positive modes.

Feature	Negative	Positive
Peaks detected	21754	11705
Peak-groups with minimum SNR >2	736	376
IP-Clusters	515	251
Predictions	613	286
