Additional File 1.

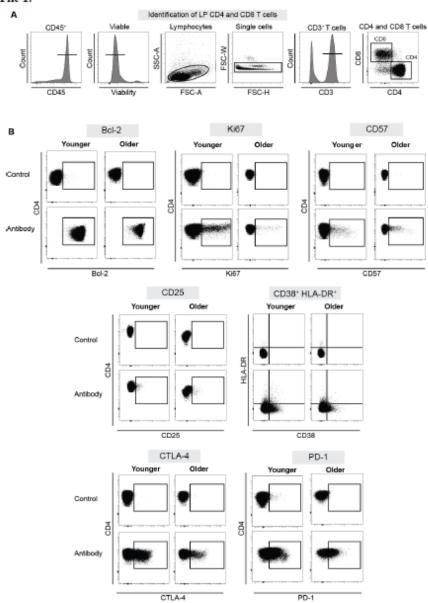

Figure S1. Multi-color flow cytometry was used to enumerate frequencies and phenotypic profiles of human colonic LP CD4 T cells. a Representative gating strategy to identify CD3⁺ CD4⁺ CD8⁻ or CD8⁺ CD4⁻ T cells within CD45⁺, viable, single lymphocytes. FSC: forward scatter, SSC: side scatter; A: Area, H: Height; W: Width. b Representative flow plots are shown for each marker for a Younger and Older person with gates established on control staining (upper panel: isotype control for Bcl-2, Ki67, CD38 and CTLA-4, Fluorescence minus one (FMO) for CD25 or FM4 for CD57, HLA-DR and PD-1).
