

Supplementary Material

1 Supplementary Figures and Tables

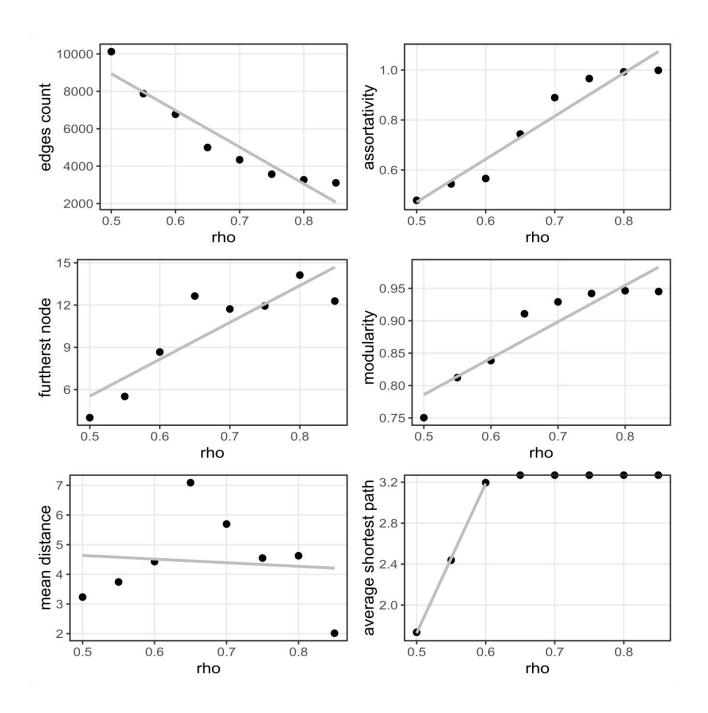

1.1 Supplementary Figures

Supplementary Figure 1. Genus level distribution 16S rRNA diversity of the putative hydrocarbon degraders detected in the sampled stations.

Supplementary Figure 2. Principal coordinate analysis (PCoA) plot of the 16S rRNA gene microbial diversity based on Unifrac dissimilarity measure in the sampled stations: A) abundance weighted; and B) unweighted PCoA plots. The amount of variance explained by each axis is reported within square brackets.

Supplementary Figure 3. Changes in network statistics as a function of increasing correlation thresholds. A linear model was fitted to the data (grey line). A clear change in network properties is present for correlation thresholds ≥ 0.60 .
