Compiling the Case Universe of Interventions

The most complete document that lists US military interventions since before the 1800s is the Congressional Research Service’s (CRS) “Instances of Use of United States Armed Forces Abroad”, from 1798 to 2017 (Salazar Torreon 2017). We have meticulously reviewed every intervention listed in this document, written a 3-4-page case study on each confirmed operation that requires at least three academic sources for case confirmation, and coded all related variables for the MIP. At least three individuals on the team have reviewed each coding choice to maximize the reliability of measures. The CRS document was thus used to create the preliminary set of cases for the MIP dataset, but it, too, possesses several limitations. First, covert operations are not included. Second, the list itself is in PDF narrative format, requiring the manual input of each data into statistical software. Third, the list does not disaggregate post-2000 military missions, sometimes listing over ten target countries and missions as one unit of analysis per year in many cases (e.g. as part of the Global War on Terror). We, therefore, had to make judgments on disaggregating, aggregating, or removing military operations, beyond standard information gathering steps. Any discrepancies we have encountered are listed in our codebook with a one-paragraph description.

Beyond reviewing the CRS listing as well as existing datasets on US military interventions, MIP also relied on a set of documents and data from the Institute for Defense Analysis measuring Joint

Task Force Headquarters and operations since the 1970s (Worley 2005). We also reviewed Donald Westerfield's book on War Powers for additional intervention archives as well as Harry Ellsworth's *One Hundred Eighty Landings of the United States Marines* until 1934 for additional cases (Ellsworth 1974). Lastly, we explored all cases in existing datasets on US military interventions, often altering measures, disaggregating operations, or even marking the cases as unconfirmed interventions or clear non-interventions via our detailed case studies. Lastly, we have backlogged all new data collected from our case studies back into the MIP dataset as per our codebook guidelines and case study backlogging templates included as supplementary documents in this article. Therefore, each case study of US military intervention included in MIP will also have a listing of its source documentation, which spans a wide range of government documents, scholarly books, media reports, and more.

It is also important to mention important sources of key MIP variables. Several sources exist to measure US military casualties across history. CRS offers data tables on "American War and Military Operations Casualties," from 1775 to 2017; while Historical Statistics of the US provides US Casualties by Service Branch, from 1775 to 1995 (Gartner 2006a,b; Leland 2012). This document includes the number of deaths for Army, Navy, Marines, and Airforce per war, as well as personnel serving worldwide, number of total casualties, number of battle casualties, number of other casualties, and number of wounded. These two documents were cross-referenced for a comprehensive analysis within the case narratives.

Lastly, the CRS offers a list of Costs of Major U.S. Wars, from 1776 to the present. This, however, is not a comprehensive list of all costs (Daggett 2010). Moreover, all estimates are of the costs of military operations only and do not include costs of veterans' benefits, interest paid for borrowing money to finance wars, or assistance to allies. Thus, MIP supplemented this information with SIPRI's dataset on Military Expenditures and Peace Operations, from 1949 to 2017, as well as its own case study narratives (Stockholm International Peace Research Institution 2016).

For further details on how MIP measures intervention characteristics, hostility measures, as well as other key measures of intervention outcomes and causal factors, refer to the codebook as part of the article's supplementary material.
