

S Table 5: Multivariate regression for predictors of visual acuity as measured by ETDRS letters. Abbreviations: MELAS = Mitochondrial encephalomyopathy, lactic acidosis, and stroke-like episodes

| Visual Acuity by ETDRS letters | | |
|---------------------------------------|----------------------|-----------|
| Predictors | Estimates | Std error |
| Bardet-Biedl Syndrome [vs. Control] | -58.96 | 12.09 |
| MELAS [vs. Control] | -5.12 | 8.99 |
| Rod Cone [vs. Control] | -20.81 | 3.88 |
| Stargardt [vs. Control] | -33.48 | 6.62 |
| MT-ATP6 [vs. Control] | -22.63 | 15.44 |
| Age (years) | -0.1 | 0.09 |
| Gender [Male vs Female] | -4.16 | 2.94 |
| Smoking Status [Former vs. Current] | 22.18 | 6.81 |
| Smoking Status [Never vs. Current] | 14.79 | 6.03 |
| Race [Black vs. White] | 6.29 | 5.44 |
| Race [Other vs. White] | -1.88 | 5.41 |
| FPP heterogeneity | 2.99 | 4.24 |
| FPP Intensity | 0.12 | 0.21 |
| Lens Status [Pseudophakic vs. Phakic] | -20.14 | 8.19 |
| Observations | 198 | |
| R2 / R2 adjusted | 0.299 / 0.253 | |

Abbreviations: MELAS = Mitochondrial encephalomyopathy, lactic acidosis, and stroke-like episodes; MT-ATP6 = Mitochondrial ATP synthase membrane protein; FPP= Flavoprotein Fluorescence; ETDRS= Early Treatment in Diabetic Retinopathy
