Table S1 Median (50th percentile), interquartile range (25th and 75th percentiles), and 95% confidence intervals (2.5th and 97.5th percentiles) of estimated hypoxic extent from all available GLNPO, NWRI and GLERL cruises for 1987-2007. This table presents the same information as that in Figure S2, but in tabular form.

Table S2 Dates and total number of central basin DO measurements for all available GLNPO, NWRI, and GLERL cruises. The shading indicates the data source and the date(s) when sampling occurred in the central basin. The number for each cruise represents the number of observations in the central basin. Cruises that observed hypoxia (i.e. that had at least one observation below 2 mg/l) are outlined in black.
