3, ^{19}F, ^1H and ^{13}C NMR spectra for new compounds	S18
4, Reference	S69

1, General Information

All reactions were carried out under the N₂ atmosphere, DMF and DMSO were distilled prior to use. Reagents were purchased at the commercial quality and used without further purification.

¹H NMR spectra were recorded at the Bruker 400MHz or Varian 300MHz spectrometer. Chemical shifts are reported in ppm relative to TMS as a reference (CDCl₃ = 7.26 ppm). The following abbreviations are used to explain the multiplicities: s = singlet, d = doublet, t = triplet, q = quartet, m = multiplet, br = broad.

¹⁹F NMR spectra were recorded at the Bruker 300 MHz or Varian 300 MHz spectrometer without proton decoupling. Chemical shifts are reported in ppm relative to CFCl₃.

¹³C NMR spectra were recorded on a Bruker 100 MHz spectrometer with complete proton decoupling. Chemical shifts are reported in ppm relative to TMS as a reference (CDCl₃ = 77.0 ppm).

IR spectra were collected on a Nicolet IN10 FT-IR spectrometer, are reported in terms of frequency of absorption (cm⁻¹).

EI-MS spectra were recorded on an Aligent 5973N MSD.

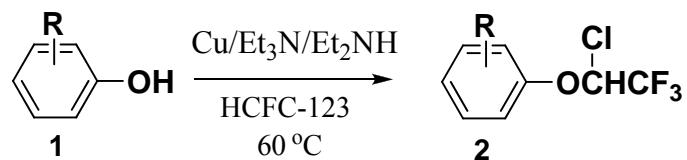

EI-HRMS spectra were recorded on a Waters Micromass GCT Premie.

ESI-MS spectra were recorded on an Aligent LC/MSD SL.

ESI-HRMS spectra were recorded on an APEXIII 7.0 TESLA FTMS.

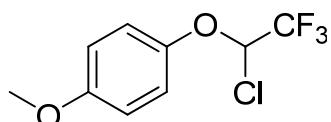

2, Experimental Procedure and Characterization

1) General procedure for Copper-mediated radical cross-coupling between HCFC-123 and phenols.

A 20 mL sealed tube was charged with Cu powder (10 mmol, 0.64 g) and filled with N₂. HCFC-123 (10 mL), *p*-MeOPhOH (1a, 5 mmol, 0.620 g), Et₃N(6.25 mmol, 627 mg) and Et₂NH (10 mmol, 0.731 g) were added into this sealed tube. The solution in the sealed tube was stirred at 60 °C for 3 h. After the solution was cool, the mixture was poured into Et₂O (50 mL). The precipitation was removed with filtration. The solvent was removed and the residue was purified by flash chromatography on a silica gel column using PE:DCM = 5:1 as the eluent. 2a was obtained as the colorless oil (1.14 g, 95% yield).

1-(1-chloro-2,2,2-trifluoroethoxy)-4-methoxybenzene (2a)

Colorless oil

¹⁹FNMR (282 MHz, CDCl₃): -80.0(d, *J*' = 4 Hz);

¹HNMR (400 MHz, CDCl₃): 7.06(d, *J*' = 9 Hz, 2H), 6.90(d, *J*' = 9 Hz, 2H), 6.02(q, *J*' = 4 Hz, 1H), 3.80(s, 3H);

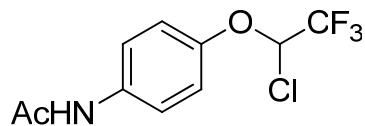

¹³CNMR (100 MHz, CDCl₃): 156.8, 148.6, 120.2(q, *J*' = 280 Hz), 118.6, 114.9, 86.9 (q, *J*' = 39Hz, 55.5z);

3) Synthesis of difluoroviny aryl ether from 2

A 10mL schlenk tube was charged with Zn (10 mmol, 0.650 g) and filled with N₂, then nitrogen purged solvent DMSO (10 mL) and **2e** (5 mmol, 1.305 g)was added. The mixture was stirred at 110 °C for about 3 h detected by TLC. After the reaction was over, the mixture was poured into Et₂O (50 mL). The resulted solution was washed with was water and dried over Na₂SO₄. The solvent was removed and the residue was purified by flash chromatography on a silica gel column using PE as the eluent. **5e** was obtained as colorless oil (0.948 g, 92% yield).

1-(2,2-difluorovinyloxy)-4-methoxybenzene (5a)

Colorless oil

4) Trapping the radical intermediate with styrene

A 10mL sealed tube was charged with Cu powder (3 mmol, 0.192 g) and filled with N₂.

HCFC-123 (4 mL), styrene (2 mmol, 0.208 g) and Et₂NH (10 mmol, 0.731 g) were added into this sealed tube. The solution in the sealed tube was stirred at 75 °C for 3 h. After the solution was cool, the mixture was poured into Et₂O (50 mL). The precipitation was removed with filtration. The solvent was removed and the residue was purified by flash chromatography on a silica gel column using PE as the eluent. **6** was obtained as the colorless oil (0.497 g, 97% yield).

(1,3-dichloro-4,4,4-trifluorobutyl)benzene (**6**)
