1. NMR spectra of the 1,4-bis(2,2-bis((S)-4-isopropyl-4,5-dihydrooxazol-2-yl)ethyl)benzene ligand (*i*-PrDiBox) (2).

2. Typical HPLC conditions and chromatograms from the Henry reactions

Enantioselectivities were determined by HPLC on a Waters Alliance Chromatograph with a PDA detector. The absolute configurations were established by comparison with literature data.¹
