Supplementary Materials

¹H-NMR, ¹³C-NMR spectra were recorded on a Varian Mercury (400 MHz) and JEOL JNM-ECA600 (600 MHz). IR spectra were measured on a JASCO FT/IR-410 spectrophotometer. Melting points were determined with a Yanagimoto micro melting point apparatus without correction. High- and low-resolution mass spectra were measured on a JEOL JMS-DX-303 or a JEOL JMS-AX-500. Merck silica gel 60 (63-200 mm) was employed for flash column chromatography.

Substrates

(2*R*,*S*)-4-(*t*-Butyl)-2-phenylthiocyclohexanone *ax*-1 ¹ Under an argon atmosphere, to a stirred solution of diisopropylamine (55 mmol, 7.8 mL) in THF (80 mL) at -78°C was added dropwise a solution of 1.6 M butyllithium in hexane (48 mmol, 30 mL), and the mixture was stirred at the temperature for 30 min. The mixture was warmed to 0 °C, and stirred for additional 30 min at 0°C. After cooled to -78 °C, a solution of 4-(*t*-butyl)cyclohexanone (40 mmol, 6.17 g) in THF (10 mL) was added. The mixture was stirred for 30 min, and then diphenyl disulfide (42 mmol, 9.17 g) in THF (20 mL) was added at -78°C. The mixture was warmed to room temperature, and stirred overnight. The reaction was quenched with saturated aqueous NH₄Cl, and the organic materials were extracted twice with diethyl ether. The combined organic layers were washed with brine, dried over MgSO₄, and concentrated. The residue was purified by flash column chromatography (hexane / ethyl acetate = 50) to give *ax*-1 (4.46 g, 43%). Colorless crystals.
