

# Effect of Rubbing-Induced Polymer Chain Alignment on Adhesion and Friction of Glassy Polystyrene Surfaces

Melvina Leolukman and Seong H. Kim\*

Department of Chemical Engineering, The Pennsylvania State University

University Park, Pennsylvania 16803

## Appendix:

The topography and lateral force images of the pristine PS film surface, before 3072 line scans at the top, obtained with a PS particle tip at a constant contact force of 27nN.
