Supplementary Information

Does the exclusion of meiofauna affect the estimation of biotic indices using stream invertebrates?

John G Mbaka, Charles M M'Erimba, Henry T Karanja, Jude M Mathooko and Mercy W Mwaniki
African Zoology 2016, 51(2): 91–97. DOI: 10.1080/15627020.2016.1196120

Figure S1: Photographs of the Naro Moru River upstream (a), midstream (b) and downstream (c) study sites

Figure S2: Plots of axis 1 versus 2 (a, June; b, September) for non-metric multidimensional scaling (NMDS) of the density of invertebrates retained in the greater than 0.5 mm (0.5) and total fractions (Tot) in the Naro Moru River upstream (US), midstream (MS) and downstream (DS) study sites. The 0.5 and Tot invertebrate fractions at site DS overlap in (b)
